loss of appetite, and fatigue. If you keep going higher and ignore signals from your body, you could develop HAPE, high altitude pulmonary edema, or HACE, high altitude cerebral edema, both of which are very serious.

All that said, some of the best views on earth are seen from up high The Key to your success? Go up slowly, __24__ over two or three days, if possible; and using these tips will help you feel good at the top.

Follow these tips

Take it easy: during the first day or two at altitude, don't __25__ yourself. Do a little exercise, but give your body time to adjust.

Sample the snacks: stick to small meals the first few days, because the digestive system can become stressed at elevation.

Guzzle water: drinking plenty of H2O prevents dehydration, which has symptoms similar to those of those of acute mountain sickness.

Shield your skin: ultraviolet light increases by five percent per thousand feet of altitude, so accessorize with protective gear such as sunglasses, a broad - brimmed hat, and sunscreen.

Passage 2

Chinese researchers have found that an immune signaling molecule can boost fat burning in mice, __26__ a potential treatment for obesity.

There are various types of fat in the human body.

Brown fat is like a built - in heater; It helps __27__ the body's temperature, and babies are born with a lot of brown fat to create heat. Most of the fat in our bodies is white fat, which builds up when people take in extra calories.

In recent years, a newly discovered beige fat has become a popular focus of research. Beige fat has a high number of mitochondria(线粒体) and can burn calories more easily. More importantly, humans lose most brown fat through adulthood but can keep producing beige fat __28__ certain hormones and cold temperatures.

In previous studies, researchers from China's Sun Yat -sen University found that immune signaling molecules(分子) called cytokines play a role in regulating the production of beige fat.

In the new study published in the journal PLOS Biology, researchers focused on a type of cytokine called interleukin - 25(IL - 25) they found that boosting IL - 25 levels could __29__ the effects of cold temperatures and hormone stimulation, making the mice produce more beige fat.

The researchers found that IL - 25 interacted with two other types of cytokines to regulate immune cells called macrophages(巨噬细胞) , the researchers then __30__ IL - 25 to mice on a high - fat diet which successfully helped them lose weight and maintain their insulin functions.

The researchers said the results show that 1L - 25 plays a key role in producing beige fat, and that increasing 1L - 25 signaling could be a potential treatment for obesity.

第三部分 综合知识

一、单项选择题

Passage 1

Native ads—or ads that take on the look and feel of the content surrounding them—are taking over digital advertising.

By 2021, native display ad revenue in the US, which includes native in-feed ads on publisher properties and social platforms, will make up 74% of total US display ad revenue, up from 56% share in 2016, according to new BI Intelligence estimates based of historical data from the Interactive Advertising Bureau (IAB) and PwC, as well as IHS.

The rapid uptick in native's share of display ad revenue can largely be attributed to the dominance of social platforms like Facebook and Twitter—which were early champions of native and rely almost entirely on native formats—as well as the introduction of new programmatic technologies that are making it easier for publishers and advertisers to scale native campaign.

In a new report from BI Intelligence, we break out native ads into categories: social native, native-style display, and sponsored content (also referred to as premium native). We provide forecasts for how revenues from these formats will grow over the next five years and look at what factors, in particular, are driving up spending on each of these ad units. As a note, because revenues from these three types of native content can overlap, we do not provide an overall native forecast. Finally we lay out some of the challenges that face properties that rely on native ads, namely ad frequency and scalability issues.

Here are some key takeaways from the report:

Native-display ads, including social native and native ads in-feed on publisher websites, will make up the bulk of native ad revenue from 2016-2021. Native display ad revenue in the US will rise at a five-year compound annual growth rate (CAGR) of 17% during this time period to eclipse $36 billion. The rise of native video ads, particularly on social platforms, will be one of the main drivers of this growth.

1. The native display ad revenue in the US is predicted to account for _____ of total US display ad revenue by 2021?

A. 18% B. 74% C. 56% D. 17%

2. According to passage, what is NOT the reason for the rapid uptick in native's share of display ad revenue?

A. Publishers and advertisers can now scale native campaigns easily.

B. The introduction of new programmatic technologies.

C. The dominance of the digital advertising.

D. The dominance of social platforms.

3. According to the passage, which of the following will NOT be included in the new report from BI Intelligence?

A. The illustrations of what factors are driving up spending on each of these ad units.

B. The forecasts for how revenues from these formats will grow over the next five years.

5. The passage is most probably an excerpt from _____.

A. an introduction of a novel B. a business report website

C. a textbook about advertisement D. business history book

Passage 2

Two years ago, there were 20,000 Airbnb listings in Paris. A year later, the number had climbed to 40,000 and a housing inspector told The Wall Street Journal, "The center of our city is becoming deserted. More and more, it's just tourists." Since then, yet another 20,000 listings have appeared, so it's no surprise that the company with the tagline "Belong Anywhere" has experienced a frosty welcome from city governments around the world struggling to deal with this explosion of tourist accommodations.

Airbnb continues to present its business as low-impact, made up of everyday hosts occasionally renting out their own home. A recent Airbnb report on its business in Lisbon shows that "many listings on Airbnb in Lisbon are local residents' homes," reassuring readers that "72 percent of hosts in Airbnb in Lisbon have only one listing." But this is being economical with the truth: my independently collected data set shows that the 28% of hosts with more than one listing (who can be considered "commercial" hosts) account for two-thirds of the company's business in Lisbon. And while Airbnb clarifies that "70 percent of Airbnb guests in Lisbon stay outside the typical tourist hotspots," my data shows that the majority of visits take place inside the two central districts of Misericordia and Santa Maria Maior, an area of only about six square kilometers. With the number of listing in this small city of half a million people growing from 5,500 in May 2015 to over 10,000 today, a significant impact is inevitable. Joao Seixas, a geography professor at the New University of Lisbon, and his colleagues are "very much concerned with what is rapidly happening to the historical center of our beautiful city". Our estimate is that in the last three years, around one-quarter or even one-third of the housing stock has changed function, mainly toward financial investments and short rentals.

6. Which of the following is a possible situation tourists may encounter in Paris?

A. Airbnb's housing inspector is checking the listings.

B. Their neighbors are tourists from other countries.

C. The government gives them a frosty welcome.

D. They don't have many choices of accommodation if they are visiting the center of Paris.

7. All of the following are true EXCEPT _____.

A. local residents leave the city center because of Airbnb

B. tourists think Airbnb is taking advantage of them

C. city governments are not eager to support Airbnb

D. in two years, Airbnb listings have tripled

8. According to the author, Airbnb's reports is _____.

A. deceitful B. made up C. true D. false

9. According to the second paragraph, which of the following statements is not mentioned?

A. At least one-quarter of the housing stock has become financial investments and short rentals.

B. 72% of hosts with one listing account for one third of the company's business in Lisbon.

C. Airbnb has a huge impact on the historical center of Lisbon.

根据下列材料,回答 61 - 65 题。

新冠疫情对 2020 年全球经济的伤害是显而易见的,大多数国家都没有能够维持经济的正增长。

为了减缓衰退,重新振作经济,大多数国家采取了一系列措施刺激经济。这些措施包括给予民众现金补贴,也就是俗称的"直接发钱",针对中小企业的减税、免税等税收优惠,以及"开闸放水"。

在所有国家的刺激中,最为引人注目的是美国。2020 年年底,美国宣布了一个 1.9 万亿美元的纾困计划。这项计划的主要内容包括:400 亿元用于延长目前失业补助计划并提高到 400 美元/周,350 亿元用于州政府及地方政府援助,300 亿元用于一次性现金补助,折合每人 1 400 美元,等等,其目的主要是对居民、小企业、州和地方政府的援助。

通过这种方式,预计 2021 年第一季度,美国居民可支配收入将大幅攀升,二三季度则在失业补助等政策的支持下维持较高水平。随着这项计划落地实施,加上美元作为世界货币的特殊地位,我国一些人开始对国内通胀充满担心。

这种担心不无道理。在经济全球化的当今社会,没有哪个国家不会不受到美国财政政策、经济手段的影响。

从我国与美国的经济联系来看,整体来看,美国制造业相比服务业对我国产出的拉动作用更为明显。

以全球投入产出表计算,美国的国防、建筑业、汽车、机械设备等行业拉动我国产出力度最大。而这些产业在美国刺激计划影响下,会得以复苏和发展,因此,我国的一些行业,例如计算机、电子产品和光学产品制造、化学品及化学制品制造、基本金属制造、电力设备制造、采矿和采石等,也将受到拉动。

这些产业的复苏与恢复发展,势必推动国际大宗商品的价格,而 2020 年底至 2021 年初的情形已经验证了这一点。大宗商品价格涨势较快,不仅增加了全球范围内通胀升温预期,也令国际金融市场波动加大,这都将对我国外汇储备规模的稳定形成扰动。

事实证明,风险与机遇不过是硬币的两个面,降低风险,把握机遇,着眼未来,通胀引起的不良效应也终将成为历史上的一次小小波澜,没必要过度焦虑。
