第一节 视听一致+读题方法

一、视听一致

练习1 初阶 2023.12.2

12. A) Eliminating their root causes.
- B) Forecasting flood risks accurately.
- C) Identifying the cities' geological features.
- D) Finding out the changing climate patterns.

注意：音频选项顺序不同

练习2 中阶：音频 2024.8.1

1. A) Use professional equipment.
- B) Climb to the nearby heights.
- C) Fix their eyes due north.
- D) Make use of phone apps.

注意：多个选项同时正确

练习3 进阶：长难句 2024.08.2

15. A) We have poor awareness of how many controversial issues are being debated.
 B) No one knows better than yourself what you are thinking about at the moment.
 C) No one can change your opinion more than those who speak in a convincing tone.
 D) We are likely to underestimate how much we can be swayed by a convincing article.

二、做题方法

1. 何时做题？何时涂卡？

- A) _____
 B) _____
 C) _____

2. 做题方法“两大扫”

A. 【题扫找相同】题目扫读

B. 【题扫找不同】选项排查

短选项：

长选项：

练习4 并列题 2021.12.2

9. A) Their food mainly consists of small animals and fish.
 B) They use their sense of hearing to capture their prey.
 C) Their species is different from that of silver bats.
 D) They have big eyes and destructive visual centers.

19. A) By means of echo location.
B) With the help of starlight.
C) By means of vision and smell.
D) With the aid of daylight vision.

练习5 帽子题 2024.12.2

22. A) Why smells can activate emotional memories.
B) How powerful the senses of smell can become.
C) How scent particles revive memories forgotten.
D) Why the scent of bread has a strong mental impact.

练习6 相似选项-排除题 1 2024.12.1

16. A) All societies are built upon the cornerstone of basic values.
B) Everyone everywhere demonstrates seven character traits.
C) All societies are kept together by seven basic moral rules.
D) Everyone everywhere shares a universal moral standard.

练习7 相似选项-排除题 2 2024.12.2

23. A) The brain cells' processing of information experienced as strongly emotional.
B) The activation of the brain's emotion processing area by chemical particles.
C) The interaction between chemical particles and the brain cells responsible for smell.
D) The neurons of scent going directly to the brain's emotional and memory centers.

练习8 同义替换—交叉 2024.6.2

20. A) More new mothers tend to take greater care of their children.
B) More new mothers are economically able to raise children.
C) A larger proportion of women take pride in their children.
D) A large proportion of women really enjoy motherhood.

练习9 同义替换—交叉 2025.6.1

16. A) Affect our attitude to novel tasks.
B) Distinguish us in the social world.
C) Outweigh IQ in importance.
D) Impact academic achievement.

第二节 同义替换 + 出题节奏

一、同义替换

1. 同义替换：普遍存在

2. 同义替换

3. 否定替换

(1)

(2)

(3)

(4)

练习 1 2024.6.2 同义替换冲分

12. A) She threw up in the bathroom.

B) She slept during the cruise ride.

C) She dozed off for a few minutes.

D) She bowed out her marathon race.

练习 6 2023.3 讲读 3 听力理解 2

25. A) Refraining from promoting similar products.
B) Avoiding too much advertising early on.
C) Creating an exotic corporate culture.
D) Attracting sufficient investment.

练习 7 2024.12.2 讲读 3 听力理解

28. A) Inaccuracy and alterability.
B) Susceptibility to polar interpretations.
C) Being personal and individualistic.
D) Being dependent on relevant scenarios.

二、听力理解题

1. 开头原则

2. 顺序原则

3. 关键词原则

练习 8 2023.8.2 讲读 2 听力理解

19. A) They don't teach basic organization.
B) They don't focus on teaching techniques.
C) They attach little importance to recipes.
D) They hire very few distinguished chefs.

20. A) It's unique to celebrity diets.
B) It's a way of transformation.
C) It's too demanding for them.
D) It's a way of life to them.
21. A) Respects others so as to be respected.
B) Use time and resources in a wise way.
C) Cultivate a habit of self-discipline.
D) Learn from philosophers earnestly.

第三节 短文解题技巧

短文解题技巧：

一、初次节商

二、初次、明暗高线符号

练习1 2024.6.2 原文1

9. A) They have created the smallest remote-controlled walking robot in the world.
B) They are going to publish their research findings in the journal Science Robotics.
C) They are the first to build a robot that can bend, crawl, walk, turn and even jump.
D) They are engaged in research on a remote-controlled robot which uses special power.
10. A) It changes its shape by complex hardware.
B) It is operated by a special type of tiny motor.
C) It moves from one place to another by memory.
D) It is powered by the shape property of its body.
11. A) Replace humans in exploratory tasks.
B) Perform tasks in tightly confined spaces.
C) Explore the structure of clogged arteries.
D) Assist surgeons in highly complex surgery.

练习2 2024.6.1 原文1

9. A) Whether consumers should be warned against ultra-processed foods.
B) Whether there is sufficient scientific consensus on dietary guidelines.
C) Whether guidelines can form the basis for nutrition advice to consumers.
D) Whether food scientists will agree on the concept of ultra-processed foods.
10. A) By the labor cost for the final products.
B) By the degree of industrial processing.
C) By the extent of chemical alteration.
D) By the conversion of classification.
11. A) Increased consumers' expenses.
B) Greater risk of chronic diseases.
C) People's misunderstanding of nutrition.
D) Children's dislike for unprocessed foods.

练习 3 2023.12.1 短文 2

12. A) It is what members use to alleviate tension in a team.
B) It is what employers are increasingly seeking after.
C) It is conducive to getting over a recession.
D) It is necessary for learning a new task.
13. A) Make better choices.
B) Follow innovative ideas.
C) Achieve negotiation daily.
D) Accumulate work experience.
14. A) Workers show more emotional intelligence.
B) Workers use brains more than muscles.
C) People usually work flexible hours.
D) People often work in teams.
15. A) Leave the group as soon as possible.
B) Anticipate setbacks well in advance.
C) Decide on new priorities speedily.
D) Stick to original goals confidently.

第四节 讲座解题技巧

一、信号词：题目顺序

二、讲座出题节奏

讲座 1&2:

讲座 3:

练习 1 2024.6.1 讲座 2

19. A) Help save species from extinction and boost human health.
B) Understand how plants and animals perished over the past.
C) Help gather information publicly available to researchers.
D) Find out the cause of extinction of Britain's 66,000 species.
20. A) It was once dominated by dinosaurs.
B) It has entered the sixth mass extinction.
C) Its prospects depend on future human behaviour.
D) Its climate change is aggravated by humans.

21. A) It demands all other efforts to conserve, protect and restore biodiversity on earth.
B) It is costly to get started and requires the joint efforts of thousands of scientists.
C) It can help to bring back the large numbers of plants and animals that have gone extinct.
D) It is the most exciting, most relevant, most timely and most internationally inspirational.

练习2 2024.8.1 讲座1

16. A) Because they are learned.
B) Because they come naturally.
C) Because they have to be properly personalized.
D) Because there can be more effective strategies.
17. A) The extent of difference and of similarity between the two sides.
B) The knowledge of the specific expectation the other side holds.
C) The importance of one's goals and of the relationship.
D) The approaches one adopts to conflict management.
18. A) The fox.
B) The shark.
C) The owl.
D) The eagle.

练习3 2023.3.1 讲座2

19. A) The number of older Americans living alone is on the rise.
B) Chronic loneliness does harm to senior citizens in particular.
C) Correlations have been found between loneliness and ill health.
D) A growing number of US seniors face the risk of early mortality.

20. A) Medication is available for treating loneliness.
 B) Loneliness rarely results from living alone.
 C) Being busy helps fight loneliness.
 D) Loneliness is probably reversible.
21. A) Living with one's children
 B) Meeting social expectations.
 C) Meaningful social contact.
 D) Timely medical intervention.

第五节 长对话解题技巧

一、长对话做题步骤

- A) _____
B) _____
C) _____

二、长对话解题指南

1. 听快读：题目和选项
2. 听慢读：多听原文中的关键词，注意同义替换
3. 人声快：注意“男”“女”人声快代

练习1 2024.6.1 对话1

1. A) Reply to the man's letter proposal within a short time.
B) Sign the agreement if one small change is made to it.
C) Make a sponsorship deal for her clinic at the meeting.
D) Give the bank some good news regarding the contract.

2. A) They are becoming impatient.
B) They are afraid time is running out.
C) They are used to making alterations.
D) They are concerned about the details.
3. A) To prevent geographical discrimination.
B) To tap the food and beverage markets.
C) To avoid any conflict of interest.
D) To reduce unfair competition.
4. A) It is a potential market for food and beverage.
B) It is very attractive for real estate developers.
C) It is a negligible market for his company.
D) It is very different from other markets.

练习 2 2024.8.2 听力 2

5. A) How he has made himself popular as the mayor of Beriton.
B) How the residents will turn Beriton into a tourist attraction.
C) How charming he himself considers the village of Beriton to be.
D) How he has led people of Beriton to change the village radically.
6. A) It was developed only to a limited extent.
B) It was totally isolated as a sleepy village.
C) It was relatively unknown to the outside.
D) It was endowed with two natural resources.
7. A) The people in Beriton were in a harmonious atmosphere.
B) The majority of residents lived in harmony with their neighbors.
C) The majority of residents enjoyed very hostile conditions.
D) All the houses in Beriton looked architecturally similar.

5. A) They have helped boost the local economy.
B) They have made the residents sexually proud.
C) They have contributed considerably to its popularity.
D) They have brought happiness to everyone in the village.

Section 3 2023.8.2 第2

1. A) It was spacious and tranquil.
B) It was warm and comfortable.
C) It was stable and solitary.
D) It was tiny and noisy.
2. A) She no longer hates people talking loudly in the dorm.
B) She misses her roommate she used to complain about.
C) She begins to enjoy the movies she once found irritating.
D) She finds the crowded dorm as cozy as her new apartment.
3. A) He found the apartment perfectly furnished.
B) He had a feeling of despair and frustration.
C) He had a similar feeling to the woman's.
D) He felt the new place was like paradise.
4. A) Go to see the woman's apartment.
B) Make a phone call to his parents.
C) Buy some furniture for the woman.
D) Decorate the woman's apartment.

第六节 短文讲座强化

练习1 2023.12.1 讲座3

22. A) Cracks down on courses like science, technology, engineering and maths.
B) Remarks the ability of creative arts compared to recruit new students.
C) Look at how to reform technical and vocational education.
D) Ensure creative arts students get better value for money.
23. A) Seemingly reasonable.
B) Clearly well-grounded.
C) Extremely irrational.
D) Apparently simplistic.
24. A) A high proportion of them haven't tried to save money.
B) Most of them never hope to buy a house or to retire.
C) Forty percents of them earn less than £25,000 a year.
D) The majority of them have fairly well-paying jobs.
25. A) The content of a bank balance.
B) Britain's economy as a whole.
C) The specific degree a student earns.
D) Britain's defective educational system.

练习2 2024.6.2 讲座9

22. A) Add to indoor toxic pollutants.
B) Absorb poisonous chemicals.
C) Beautify the home environment.
D) Soak up surrounding moisture.
23. A) NASA did experiments in sealed containers simulating the super-insulated offices of 1970s.
B) It was based on experiments under conditions unlike those in most homes or offices.
C) NASA conducted tests in outer space whose environment is different from ours.
D) It drew its conclusion without any comparative data from office superinsulators.
24. A) Natural ventilation proves much more efficient for cleaning the air than house plants.
B) House plants disperse chemical compounds more quickly with people moving around.
C) Natural ventilation turns out to be more effective with doors and windows wide open.
D) House plants in a normal environment rarely have any adverse impact on the air.
25. A) The root cause for misinterpretations of scientific findings.
B) The difficulty in understanding what's actually happening.
C) The steps to be taken in arriving at any conclusion with certainty.
D) The necessity of continually re-examining and challenging findings.

练习3 2023.6.1 讲座3

22. A) They lived mostly in Africa for about 200,000 years.
B) They moved out of Africa about 60,000 years ago.
C) They preferred to live in Europe rather than in Asia.
D) They spread across Europe and Asia in a few decades.

23. A) The Luan river in Guangxi Zhuang Autonomous Region.
B) The human fossils discovered most recently in Africa.
C) The traces of human migration out of Africa to Asia.
D) The discovery of two modern human teeth in China.
24. A) There must have been some reason for human migration.
B) Humans had access to abundant fresh seafood there.
C) Humans adapted themselves to the environment there.
D) There have been changes in animals' living conditions.
25. A) When modern humans started to disperse out of Africa.
B) How humans settled down on the Arabian Peninsula.
C) Why fresh water is so important for human survival.
D) What path modern humans took to migrate out of Africa.

练习4 2025.6.2 讲解1

16. A) Chronic depression.
B) Growing feebleness.
C) Hip fracture.
D) Fatal infections.
17. A) It feels real and relevant.
B) It contributes to psychology.
C) It outcompete lots of academics' research.
D) It wins recognition outside of Birmingham.
18. A) By bringing together experts old and young.
B) By counting on advanced modern technology.
C) By making full use of her expertise.
D) By combining multiple perspectives.

第二章 听力真题综合带刷

第七节 2024年12月第1套听力真题带刷

听力真题带刷准备 2024.12.1 六级听力真题卷（纸质），课上进行完整套题刷题及题目精讲。

第八节 2024年12月第2套听力真题带刷

听力真题带刷准备 2024.12.2 六级听力真题卷（纸质），课上进行完整套题刷题及题目精讲。

第三章 听力原文及参考答案

听力技巧精讲1 答案：视听一致 + 读题方法

一、视听一致

练习1 初阶 2023.12.2 B

Climate scientists predict that many parts of the world will be increasingly prone to floods. This is a serious risk to human lives and property. [12] So understanding and accurately forecasting flood risks is a key challenge for vulnerable cities around the globe. In 2017, Derek Leffis of the Virginia Institute of Marine Science started a project called Catch the King. It uses a smartphone app to collect the data of ordinary citizens during high tides.

练习2 中阶：难度 2024.6.1 D

W: ... [1] People will only see a bird without spec. However, that does not mean one needs professional equipment. Even the most ordinary of telescopes should be conducive for people to observe and wonder at this flying object.

M: Many of our viewers will be wondering how they too can take part in this once-in-a-lifetime event. Where will this comet be in the sky? How can people find it?

W: The contest will be almost exactly due north, at 60 degrees above the equator. However, finding the contest is indeed very tricky. [6] And scientists here have told me there are plenty of places where that will facilitate this.

M: How fantastic! Thank you, Paula, for the information.

练习 3 听力 2024.6.2 D

If you read an article about a controversial issue, do you think you'd realize if it had changed your beliefs? No one knows your own mind like you do. It seems obvious that you would know if your beliefs had shifted. [16] And yes, a new paper in the Quarterly Journal of Experimental Psychology reveals that we actually have very poor awareness of our own belief changes, meaning that we will tend to underestimate how much we've been swayed by a convincing article.

二. 听力方法

练习 4 听力 2021.12.2 DA

There are two main groups of bees, which are believed to have evolved independently of each other, but both from a common ancestor. The first group, known as "megabees", are mostly medium-sized or large bees who eat fruits, flowers, and sometimes small animals or fish. [9] These species have distinctive visual centers and big eyes. They use senses of vision and smell to capture their prey. For example, Flying Foxes not only see well during daylight, but can also distinguish colors. They usually rely on their daylight vision and cannot fly during the night with no moonlight.

The second group, called "micro bees", are smaller in size and mostly eat insects. [10] These species use echo location to find their way and identify food. Scientists have proven that despite their poorly developed small eyes, these bees still can see during the day. When

we consider the nightly lifestyle of these bats, we will see they have to be sensitive to the changing light levels because this is how they sense when to start hunting. Moreover, vision is used by micro bats to travel over long distances beyond the range of echo location.

9. What do we learn about mega bats?

10. How do mega bats find their way and identify food?

练习5 帽子卷 2024.12.2 A

We all know that the sense of smell is powerful. The delicious scent of bread, for example, can act like a time machine. One sniff can bring back a memory from many years ago. Indeed, scent particles, in general, can revive memories that have been long forgotten. [22] But why do smells sometimes trigger powerful memories, especially emotional ones? The short answer is that the brain regions that handle smells, memories and emotions are linked.

练习8 录取通知—通读第1 2024.12.1 C

[14] All societies are held together by some unspoken moral rules, which include deferring to superiors and respecting the property of others. Oxford University has concluded. Although many cultures are moving towards more liberal, less hierarchical organisations, the new research suggests that traditional power structures and basic values of charity and brotherhood are the cornerstones of successful societies. [16] The study of 50 different cultures around the world found that all communities operate under seven basic moral codes. These universal rules are: help your family, help your group, return favours, be brave, defer to superiors, divide resources fairly and respect the property of others.

练习7 词汇选项-选词填空 2024.12.2 D

A scent is a chemical particle that floats in through the nose and into the region of the brain responsible for smell, where the sensation is first processed into a form that the brain can read. Brain cells then carry that information to the area of the brain where emotions are processed, and then to an adjacent area of the brain where learning and memory formation take place. [23] Scents are the only sensations that travel such a direct route to the emotional and memory centers of the brain. This results in an intimate connection between emotions, memories and scent, which is why scents triggered by scents are experienced as more emotional than those triggered by sight or sound.

练习8 阅读替换-选词 2024.6.2 B

Meanwhile, childbearing among women under 20 has fallen by half or more, while childbearing among women 35 and older is rising. [20] One positive consequence of this age shift is that a larger proportion of new mothers are economically prepared to raise children. Less positively, however, many women find that, as they age, they can't have as many kids as they would like. Plus, having children later in life can increase the risk of health complications.

练习9 阅读替换-选词 2025.8.1 D

Recent studies show that self-control and persistence increase academic outcomes, independence of IQ. [16] Even our personal beliefs about efforts can affect academic outcomes. Children who think effort leads to achievement outperform those who believe ability is a fixed trait. Given the link between persistence and academic success, decisions about efforts are particularly important in childhood.

听力技巧精讲2 答案：同义替换+出题节奏

一、同义替换

练习1 2024.6.2 同义替换得分 B

I don't want to boast anything, but I have always considered myself something of an elite diver. Given the opportunity, I will sleep for marathon stretches, and can dive through the most extreme watersheds. [12] On one very recent foray, crossing on the north to the town of Seilly, for example, my traveling companion spent the entire 3-hour ride throwing up in the bathroom while I dozed heavily on a plastic chair.

练习2 2024.6.2 同义替换得分 B

[22] Since NASA published a paper in 1989 claiming that house plants can suck up pollution and toxic chemicals, houseplants and houseowners have increasingly invested in money to help clean their air. But a new analysis suggests it could actually take more than 1,000 plants per square meter to gain a benefit any greater than simply opening a couple of windows.

练习3 2025.6.1 同义替换 D

W: I see. [3] Well, I'll have you know, my manager is rather indignant that it's taken you this long to come. I understand it might not be your fault, but nevertheless, you should know what the feeling is around here.

M: I understand, and I'm sorry for any inconvenience. I will try to resolve your computer problem as swiftly and optimally as I can. What else, what is the issue?

练习 4 2023.6.2 否定替换 C

W: Frank, you support radically changing universities in America?

M: [6] Yes, I believe that the purpose of higher education is to prepare young people to enter the workforce, and that our current system fails to do this. We're allocating too many resources to disciplines that don't match the needs of employers.

练习 5 2022.6 讲座 1 否定替换 1 A

Appear to be submissive, humble, grateful and uncomplaining. Show great pleasure when a doctor comes into your room, even if the visit is brief and painless. Don't challenge anyone with authority unless you're famous or very rich. These are a few strategies for dealing with today's American medical establishment. [16] When patients want to be treated with respect and consideration, not in my experience, too few hospitals and doctors are ready to do that. In his book, *A Whole New Life*, novelist Reynolds Price recalls that his doctors chose a crowded hallway as the place to tell him he might have a tumor on his spinal cord. It did not occur to the two physicians that a hallway was not the most appropriate place for that particular piece of news.

练习 6 2023.3 讲座 3 否定替换 2 B

There are a lot of trivial writers now and it can be hard to stand out from the crowd, which is really why we started *We Are Travel Girls*. Be prepared to work hard if you want to turn it into a full-time business. [25] And try not to rush in selling subscriptions, even if others have created a dedicated audience. The size of your audience doesn't necessarily need to be large, but you want them to be engaged. [26] If you post too many promotional posts on, you will turn many people off.

练习 7 2024.12.2 讲座3 综合题 A

If the person had first come across the smell in a very different context, it will be much more difficult to recover the associated memory, because the brain uses the context to give meaning to the information and find that memory. The special nature of memories brought back by senses overwhelming, they have the same drawbacks as other memories. [25] They aren't always accurate, and they can change over time. In fact, each time we remember something, the memory can become distorted. But because of the strong emotional associations these memories evoke, people who remember something due to a power are often convinced that the memories are accurate, even when they aren't.

二. 出题节选

练习 8 2025.8.2 讲座2 出题节选 AOB

Americans are obsessed with celebrity chefs. We talk about them and try to eat like them. But could we learn something more from them than recipes and techniques?

According to market data companies, Americans spend nearly 10 billion dollars a year on self-help and personal-organization products. [19] The market is huge, mostly because most college and graduate schools don't teach basic organization, but cooking schools and professional kitchens do.

Perhaps the principle of cooking organization can be extended to help even those of us who aren't top chefs.

The system that makes kitchens function is called "mise-en-place", or literally "put in place". It's a French phrase that means to gather and arrange the ingredients and tools needed for cooking.

But for many professional cooks, the phrase means something deeper. Some cooks call it their religion. It helps them coordinate vast amounts of labor and material, and transform

the lives of its practitioners through focus and self-discipline. [20] Students at the culinary institute of America view life as a way of life. It's a way of concentrating their mind to only focus on the aspects that they need to be working on at the moment, to kind of rid themselves of distractions. And it's a habit that some students carry with them even when they're not in the kitchen. They mise-en-place their life. They set up their books for class. They set up their chef whites. They shine their shoes. They know everything that they need every step of the day.

Then how does one attain this level of organization? The key to high-level organization is the mindset. Cooks can easily do six hours of preparation for a three-hour dinner shift. "Mise-en-place forces cooks to account for every minute of their time and every movement. Every component of one single dish is in one single corner, so their hand literally moves inches," explains Dwayne Lipuma, an instructor at the culinary institute of America. "Once students set up their station, I should be able to cover up their eyes. And they should know that their knives are always here, their oil is always right here, their salt and pepper is always right here."

[21] But trained at its highest level, mise-en-place says that time is precious, resources are precious, space is precious, your self-respect and the respect of others are precious. Use them wisely. Isn't that a philosophy for our time?

19. What does the speaker say about most colleges and graduate schools in America?

20. How do students of the culinary institute of America view "mise-en-place" or "put in place"?

21. What does the speaker advise us to do at the end of the talk?

听力技巧精讲3 答案：短文解题技巧

练习1 2024.6.2 短文1 ADB

Researchers in the US have created a remote-controlled robot that is so small it can sit on the tip of a US penny. In research published in the journal *Science Robotics*, a team at Northwestern University said the coin-like robot is 0.5mm wide. [9] Researchers described it as the smallest ever remote-controlled walking robot.

The tiny robot can bend, twist, crawl, walk, run, and even jump without the use of complex hardware or special power. [10] The engineers said this is because the robot is powered by the elastic recovery of its body. To construct the robot, the researchers used a simple memory alloy material that transforms to its "remembered" shape when heated.

Using a laser, the team is able to heat the robot at specific parts of its body, causing it to change shape. As the robot deforms and goes back to its original shape, it receives movement from one place to another. "Because these structures are so tiny, the rate of cooling is very fast," project lead Professor John A. Rogers said.

In fact, reducing the sizes of these robots allows them to run faster. [11] While the research is still in the exploratory phase, the team believes that technology could lead to micro-sized robots that can perform practical tasks in tightly confined spaces. "You might imagine micro robots as agents to repair or assemble small structures or machines in industry, or as surgical assistants to clear clogged arteries, to stop internal bleeding, or to eliminate cancerous tumors, all in minimally invasive procedures," Rogers said.

Dietary guidelines form the basis for nutrition advice and regulations around the world. While there is strong scientific consensus around most existing guidelines, [9] one question has recently stirred debate: should governments be required to avoid ultra-processed foods? Two papers published today in the American Journal of Clinical Nutrition outline the case for and against using the concept of “ultra-processed foods” to help inform dietary guidelines beyond conventional food classification systems.

The authors, Carlos Moazzini of the University of São Paulo and Anna Ostrop of Novo Nordisk Foundation, will discuss the issue in a live virtual debate, August 14th, during NUTRITION 2024 Live Online. [10] The debate centers around a system developed by Moazzini and colleagues that classifies foods by their degree of industrial processing, ranking them introduced to ultra-processed.

The system defines ultra-processed foods as those made using sequences of processes that extract substances from foods and mix them with chemicals in order to formulate the final product. (Ultra-processed) foods are characteristically designed to be cheap, tasty, and convenient. Examples include soft drinks and candy, packaged meals and pastries, ready-to-heat products, and reconstituted meat products.

[71] Studies have linked consumption of ultra-processed foods, which are often high in salt, sugar and fat, with weight gain and an increased risk of chronic diseases, such as type 2 diabetes, heart disease and cancer. While the mechanisms behind these associations are not fully understood, Monteiro argues that the existing evidence is sufficient to justify discouraging consumption of ultra-processed foods in dietary recommendations and government policies.

练习3 2023.12.1 作文2 BADC

Why is adaptability an important skill to cultivate in the workplace? Simply put, adaptability is a skill employers are increasingly looking for. When you spend time learning a new task rather than resisting it, your productivity goes up. You can also serve as an example to your co-workers who may be having trouble adapting, and can help lead your team forward. [13] Strategy consultant, David Clark, explains it so in this way. "I'd say flexibility is an important skill in the workplace because flexibility circumstances change. Companies introduce new products, economy might suffer a recession, customer preferences differ over time, and more. If you shake your fist at the sky and say why can't it stay the same, that's not going to do very much good. Instead, you need to recognize when circumstances have changed, so you can take appropriate action based on what is, rather than how you wish the world would be. [13] This enables you to make more accurate, informed and effective choices."

Also, the workplace itself has been evolving. [34] Today's work culture and management style is often based on consensus, rather than a rigid hierarchy. Brainstorming, which requires creativity, flexibility, and emotional intelligence, is a typical problem-solving technique. Employees who are unable or unwilling to participate will not easily move forward in the company. Employees who are flexible demonstrate other skills too. [35] They can recognize quickly when changes occur and suggest additional modifications when something is not working. They can also regroup quickly when a setback occurs, adapting to the new situation confidently and without overreacting.

听力技巧精讲 4 答案：讲座解题技巧

练习 1 2024.6.1 讲座 2 ABD

[19] The genetic code of all 1.3 million known species of animals and plants living on Earth will be mapped to help save species from extinction and boost human health. Scientists hope that cracking the genetic code of plants and animals could help uncover new treatments for infectious diseases, slow aging, improve crops and agriculture, and create new bio-materials.

In Britain, organizations including the Natural History Museum, the Royal Botanic Gardens at Kew and the Wellcome Sanger Institute have joined forces to sequence Britain's 66,000 species of animals and plants. Dubbed the Darwin Tree of Life Project, it is expected to take 10 years and cost 100 million pounds. Once completed, all the information will be publicly available to researchers.

[20] Many scientists believe that Earth has now entered the sixth mass extinction, with humans creating a toxic mix of habitat loss, pollution and climate change, which has already led to the loss of at least 77 species of mammals and 140 types of birds since 1500. It is the biggest loss of species since the dinosaurs were wiped out 66 million years ago. Scientists say that sequencing every species will revolutionize the understanding of biology and evolution, bolster efforts to conserve as well as protect and restore biodiversity.

Dr. Tim Laverwood, head of Life Sciences Department at the Natural History Museum said,

"Whether you are interested in food or disease, the history of how every organism on the

planet has adapted to its environment is needed as an generic makeup. How you then harness that is dependent on your ability to understand it. We will be using modern methods to get a really good window on the present and the past. And of course, a window on the past gives you a perspective model on the future."

[21] For Jim Smith, Director of Science at Wetlands said, "Try as I might, I can't think of a more exciting, more relevant, more timely, or more internationally instructional subject. Since 1970, humanity has wiped out 60 percent of animal populations. About 25,000 of 80,000 species surveyed are approaching extinction. We are in the midst of the sixth great extinction event of life on our planet, which not only threatens wildlife species, but also imperils the global food supply. As scientists, we all realize we desperately need to catalogue life on our fragile planet now. I think we're making history.

MC2 2024.6.1 第2 ACB

Different people use different strategies for managing conflict. These strategies are learned in childhood. Usually, we are not aware of how we act in conflict situations. We just do whatever wants to come naturally. [16] But we do have a personal strategy, and because it is learned, we can always change it by learning new and more effective ways of managing conflict. When you get involved in a conflict, there are two major concepts you have to take into account: achieving your personal goals and having a good relationship with the other person. [17] How important your personal goals are and how important the relationship is to you affect how you act in a conflict. Given these two concepts, five styles of managing conflict can be identified.

1. The turtle. Turtles withdraw into their shells to avoid conflict. They give up their personal goals and relationships. They believe it is easier to withdraw from a conflict than to face it.

2. The shark. Sharks try to overpower opponents by forcing them to accept their solution to

the conflict. They seek to achieve their goals at all costs. Sharks assume that conflicts are resolved by one person winning and one person losing. Winning gives sharks a sense of pride and achievement. Losing gives them a sense of weakness, inadequacy, and failure.

3. The Teddy Bear. Teddy bears want to be accepted and liked by other people. They think that conflict should be avoided in favor of harmony, and believe that conflicts cannot be discussed without damaging relationships. They give up their goals to preserve the relationship.

4. The Fox. Foxes are moderately concerned with their own goals and about their relationships with other people. They give up part of their goals and persuade the other person in a conflict to give up part of his goals. They seek a solution in conflicts where both sides gain something.

(18) 5. The Owl. Owls view conflicts as problems to be solved. They see conflicts as improving relationships by resolving tension between two people. They try to begin a discussion that identifies the conflict as a problem. By seeking solutions that satisfy both themselves and the other person, owls maintain the relationship. Owls are not satisfied until a solution is found that achieves their own goals and the other person's goals, and they are not satisfied until the tensions and negative feelings have been fully resolved.

练习3 2023.3.1 阶段2 BDC

Today, we are talking about loneliness. Loneliness and social isolation are growing public health concerns for people of all ages in the United States, from adolescence to the elderly. Public health experts are worried because loneliness seems to be on the rise, and studies have long found correlations between loneliness and an assortment of medical conditions that threaten health and longevity.

The problem of loneliness may be even graver than we thought. (19) A new national poll found that about a third of older Americans are lonely, and almost as many younger people

isolated. This is a serious problem as research shows that chronic loneliness is particularly harmful to senior citizens. That's because it can impair older adults' memory and damage their physical and mental health. Chronic loneliness even impacts the life expectancy of seniors, increasing their risk of early mortality.

Let's take a closer look at that poll now. More than a third of seniors in the poll said they felt lonely at least some of the time, and 27% said they sometimes or often felt isolated. This reflects how much time the seniors spent with others. Almost 30% said they socialized with friends, family or neighbors once a week or less. Women were more likely than men to report loneliness. [20] But there is good news. It looks like loneliness can be reversed. But researchers are still trying to determine the best way to do so. Why is that? Resolving the problem of loneliness among seniors often isn't as simple as getting them together with others or moving them in with their children. In fact, the poll found that seniors who lived with their children were more likely to report feeling lonely than those who didn't. This maybe because loneliness refers to the discrepancy between actual and desired relationships. So it's possible that someone who lives alone doesn't meet that definition, while someone in a house full of busy people does.

How can we solve the problem? Well, the researchers agree that it's important to address each person's underlying cause of loneliness, whether it's the death of a spouse, medical problems, or social expectations that haven't been fulfilled. It's noteworthy that there is one general recommendation. [21] While finding solutions for loneliness is highly varied, research suggests the best interventions are those that involve meaningful social contact at least once a week. Depending on the person, that could mean volunteering, acting as an old friend or something else.

听力技巧精讲5 答案：长对话解题技巧

練習1 2024.8.1 対策1 BACC

W: Thank you for meeting with me, Stephen, at such a short notice.

M: Nice a problem. Margaret. Now please give me some good news. Have you agreed to my last proposal?

W: [1] I have indeed and I wish to sign the agreement, unless one small change is to be
made a contract.

14: Margaret, we've been through this for almost a year now, back and forth making
alternates. And you sure you want to make a sponsorship deal for your clients or not? [2] I
ask this because, frankly, some people at my end are running out of patience.

W: I understand your concerns, but as I'm sure you understand, we hold our clients' best interests to be of the utmost concern. We therefore comb through the fine details of all contracts. Rest assured we all appreciate your firm's business.

M: Okay, fine. So what changes do you wish to make?

We: **Essentially, we would like the new deal to include the Middle East. That's all**

M: The Middle East Why?

W: My client has a couple of other prospective marketing deals from companies in the Middle East. These offers, should they materialize, would exclusively employ my client's image in the Middle East only. [A] Therefore, in order to avoid any conflict, we would need to ensure that both marketing campaigns do not overlap geographically.

W: What business sector in the Middle East are we talking about here?

W: Retail sector.

M: Well, that should be okay then. So long as the product is very different from our food and beverage market, there should be no conflict of interest. Nevertheless, I will have to run this through my people. I don't foresee any problem, though. [4] The Middle East is a negligible market for us. But I will need to check this with a couple of departments.

练习 2 2024.6.2 对话 2 DODA

W: Today we have a very interesting guest. Mr. Thomas Benjamin Grimes, the mayor of Berkton, is here to talk about his job and responsibilities overseeing this charming village. Mr. Grimes, thank you for being here.

M: Thank you for having me.

W: I'd like to start by stating the obvious. [5] Berkton has become one of the most popular tourist destinations in the country, and this has happened under your watch. Just how did you achieve this?

M: The achievement belongs to all the residents of Berkton. It was a shared effort where everybody pitched in for the communal good.

W: But how did this change happen? [6] In about 10 years, Berkton has gone from a relatively unknown of sleepy village to a tourism destination.

M: Yes, the change has truly been remarkable. Berkton was always fortunate to be endowed with such a beautiful natural asset. The Ambery Hills above the village remain untouched by human development, and the Somers valley just below it is equally stunning. The transformation commenced in a town hall meeting in spring 2008 over 10 years ago now, [7] when an overwhelming majority of neighbors voted in favor of "Motion 33b". This legislative proposal essentially set out to banish the synthetic appearance of all

the houses in Horton. The idea was that if all the properties looked a certain way with shared design features, then a village as a whole would look more beautiful. And it worked.

W: It certainly did. I'm looking now at a before-and-after photo, and the change is truly remarkable. It's hard to believe it's the same place. And how do the neighbors feel now?

M: From what I would say:

W: But what about the multitudes of visitors now crowding the streets? Is everyone happy about that?

M: [8] The tourists we receive are a blessing, as they have completely revitalized our local economy. Every visitor is warmly welcome.

练习3 2023.6.2 托福2 BBCA

M: Hi, Lily. How's the new apartment?

W: It's okay.

M: What? How can it be just okay when last week you were thrilled about the place and kept posting photos of it online?

W: [1] Well, last week when I moved in, the apartment seemed cozy. Just the right size for one person. But now it has become very empty and solitary.

M: Ah...that's the problem. You miss your roommate from university, don't you?

W: [2] I'm going to sound like an idiot, because I need to complain to you all the time about how crowded our dormitory room was and about all the things they did to irritate me. (Her machine moves fast as night without headphones or waking loudly early in the morning. But now I miss them so much.)

M: Of course you do. That's perfectly normal. [3] When I was my first place, I remember thinking I couldn't wait to live by myself and get away from my juvenile roommates and all their annoying habits. But then I began missing them and feeling lonely and thinking

THE FBI REQUESTS THE JURY TO CONSIDER THE FACT THAT THE FBI IS NOT A
GOVERNMENT AGENCY.

W. [3] I thought it was him the who said Doc that.

ME: Look, you lived at home with us and then you had those roommates, and this is your first time living alone. So it's hard. But your first apartment is a milestone in your life and you should celebrate it. Tell me about the apartment.

W: Actually, it's not bad. In fact, it's pretty adorable now that I have decorated it and it has everything I need. I have a kitchen to cook in and a bathroom all to myself, and then another room with my bed at one end and a sofa, a small table and chairs at the other end.

M: [4] Then does sound sensible and I can't wait to see it. And neither can mom and dad

听力技巧精讲6 答案：短文讲座强化

练习1 2023.12.1 讲座3 BACB

Earlier this month, the think-tank called Oxford published a report, "A Question of Degree", which argues that degrees in the creative arts are not good value for money. [21] Ministers, according to Oxford, should "crack down on courses that offer extremely limited value for money to students ten years after graduation", restricting the ability of such courses to recruit new students if the average graduate earns below the student loan repayment threshold. Courses like science, technology, engineering, and maths, and economics, where the average graduate earns a lot, should be favored.

The report provides insight into a government review which looks at how to reform technical education and how to ensure students get good value for money. [22] At first glance, it might even seem like Oxford have a point. According to their data, the majority of creative arts students earn less than 25,000 pounds a year, ten years after graduation. The average male creative arts student, indeed, apparently earns much less than they would, had they simply never gone to university. This isn't really good for anyone, and it's certainly no good for graduates, who are forced to endure a lifestyle where they can never save up, never buy a house, never hope to retire.

Oxford have identified a real problem. Creative arts graduates from top universities—like Oxford, with a high proportion of privately-educated students—have fairly good work prospects. [23] Well, 40 percent of all graduates—regardless of their degree—are on low

then 25,000 towards a year, 5 years after graduation, (23) This suggests that the problem isn't really to do with specific students studying specific courses, but really with the economy as a whole. Regardless of what they've studied, young people find it hard to get ahead unless they're lucky enough to be born with successful parents.

If ministers want to make education pay for young people, they need to look beyond the higher education sector, towards the wider world. The rewards that education gives us are yet measurable. They are not always instantly obvious, and certainly not always direct. An education makes you a different person from the one you would have been if you hadn't received it. We need to look at the value of education not in the context of a bank balance, but of a life. If we continue to allow ourselves to be distracted with talk of "value for money", we will all be made poorer as a result.

练习2 2024.6.2 讲座3 BEAD

(22) Since NASA published a paper in 1989 claiming that house plants can absorb air pollution and toxic chemicals, businesses and homeowners have increasingly invested in airways to help clean their air. But a new analysis suggests it could actually take more than 1,000 plants per square meter to gain a benefit any greater than simply opening a couple of windows.

(23) The problem lies in the fact that NASA conducted their tests in sealed containers that do not simulate the conditions in most people's homes or offices. The space agency was primarily concerned about keeping the air fresh for astronauts cut off in Biospheres or space stations, and helping to combat "sick building syndrome" which had become a problem due to the super-insulated and energy-efficient offices of the late 1970s.

By the early 1980s, workers regularly complained of skin rashes, sleeplessness, headaches, and allergies as they breathed in toxic chemicals from paints and plastics. NASA found that certain plants could remove chemicals from the air, and even today garden centers

recommend the plants for air cleaning properties.

[24] However, a new evaluation of dozens of studies spanning 30 years found that house plants in a normal environment have little impact. In fact, natural ventilation is far better at cleaning the air. The researchers also calculated the clean air delivery rate for plants in the studies they analyzed and found that the rate at which plants disperse the compounds was well below the usual rate of air exchange in a normal building, caused by the movement of people coming and going, opening doors and windows.

Many of the studies did show a reduction in the concentration of volatile organic compounds over time, which is likely why people have relied on them to praise the air purifying virtues of plants. But the researchers' calculations showed it would take 10 to 1,000 plants per square meter of floor space to compete with the air cleaning capacity of a building's air handling system, or even just a couple of open windows in a house.

In contrast, NASA's sealed experiment recommended one pot plant per 100 square feet. This is certainly an example of how scientific findings can be misleading or misinterpreted over time. [25] But it's also a great example of how scientific research should continuously re-examine and question findings to get closer to the ground truth of understanding what's actually happening.

练习3 2023.6.1 训练3 BOAD

Modern humans arose in Africa about 200 thousand years ago. [22] They then spread across Europe and Asia sometime after 60 thousand years ago. This is the Out-of-Africa model as it's commonly known. In the 1990s, the hypothesis found widespread acceptance, but this popular idea is in need of revision, particularly given the number of important findings across Asia over the past few decades.

For instance, many new human fossils found, particularly in China, are now dated as older than 60 thousand years. [23] This calls into question the idea that modern humans migrated

out of Africa only 60 thousand years ago. Take the recent discovery of two modern human teeth found in the Lube cave in China's Gansu's Zhangjiashan Autonomous Region. When my research team and I date these teeth, we found they were more than 70 thousand years old, a situation clearly impossible if modern humans moved out of Africa only 60 thousand years ago.

So with such findings, what happened exactly? Where does the most current data suggest we came from? The first question we should ask is, Why did modern humans leave Africa to begin with? [24] If a population is perfectly adapted to a particular environment and has access to an abundance of resources, then there really is no reason to move or change. For instance, some monkeys in Africa have a set of teeth that has hardly changed over the course of millions of years, indicating that they found a place that has worked for them.

So what happened with humans? Some researchers have suggested that population density increased to the point where smaller human groups were forced to explore new lands. Other researchers have suggested that due to major environmental events in East Africa, humans were prompted to find greener pastures. Yet another explanation could simply be that early modern human hunters were following the large animals that they relied on, and so they moved out of Africa without realizing that they were actually moving from one continent to another. Humans need daily access to reliable fresh water which appears to be absent from many coastal areas. [15] This brings us to another question: By which route did modern humans move out of Africa? No clear route across the Mediterranean from North Africa appear to be present, so the earlier hypothesis out of Africa and into Europe and Asia might have been across the Arabian Peninsula.

练习4 2025.8.2 讲题1 CAD

My current research is mainly looking at factors like stress and how it affects our immune system. So the current projects that I'm quite excited about are looking at older people and factors that are important to them.

[16] In our project, we are looking at hip fracture in older people, which is a common event and we're trying to understand the impact of depression. Often people in hospital with a hip fracture develop depression, and these are the people that then go on to become frail a lot more quickly than others. They get infections. Often these infections lead to death. So we're trying to slow down that progression to frailness. So if we can better understand how those factors interact, then we can actually start doing something about it.

The impact that my research will have in Birmingham, first of all, is obviously for older people because these are the people that are having hip fractures and developing depression, and we're trying to improve their health and their quality of life. But this isn't just a problem in Birmingham or even in the UK. This is a problem globally. People are aging. There's a lot more people in the older population who are living for longer but not necessarily staying healthy for a large part of their lives. So the last part of their life can often be full of ill health, and we're trying to understand factors that can contribute to the quality of life later on.

[17] I think the thing that excites me most about my research is that it feels real and relevant. Lots of academics are probably very excited about their research, but it might not be that relevant to those around them. Whereas I feel

that the work I do is relevant to everyone because everyone is aging. Health is an issue for everyone, regardless of their age, and what I'm trying to do is understand the factors that affect health and how we can improve the quality of life in people. So that's one of the things that really excites me about it. [18] One of the other things is, rather than just taking one perspective, we rather than looking at aging and health just from the perspective of the

psychologists, we are now bringing together a lot of different techniques and a lot of different viewpoints is actually look at the sort of different theories affecting health.

16. What does the speaker say is quite common among older people?

17. What does the speaker think causes her mom about her research?

18. How does the speaker approach her research project?

.
