第一章——阅读概述+通用思路

一、阅读概述

二、阅读概述

1. 文章

1) 文章题材

考生能读懂一般性题材的_____。

2) 文章长度和阅读要求

■ Section A 选词填空：_____ 词。

■ Section B 长篇阅读：大约 _____ 词。

■ Section C 仔细阅读：每篇 _____ 词。

2. 题目

1) 题型结构

类型	Section A 选词填空	Section B 长篇阅读	Section C 仔细阅读
题数	10 (单选题)	10 (单选题)	10 (两篇)
分值	5%	10%	20%
时间	40 分钟		

2) 做题顺序

具体时间分配:

1. Section C 仔细阅读 (min)
2. Section B 长篇阅读 (min)
3. Section A 听力理解 (min / min)

三、仔细阅读力证法——首尾呈曲

1. 标题原文 VS 原文标题?

16字: _____

2. 标题步骤

17字: _____

其他词组:

1) 大政府

2012-9

China is the latest to implement an anti-trust crackdown unveiling anti-monopoly rules last month. The draft rules followed the surprise suspension of a \$3.7 billion stock offering by billionaire Jack Ma's Alibaba Group Co., making clear that no company can evade the government's regulation. The move in China coincides with accelerating efforts in the U.S. and Europe to rein in Amazon.com, Apple, Facebook, and Google.

"The big gun bigger and bigger but without being better," says Andreas Schwab, a German member of the European Parliament who championed a 2014 resolution to break up Google. "Growing economic power, growing influence on local markets all over the world, and a growing concern of competition and consumers should be made to happen now."

47. What does the suspension of Alibaba Group Co.'s stock offering suggest?

- A) All attempts to evade regulation are doomed to failure.
- B) All attempts to monopolize sales must be cracked down.
- C) All companies must be regulated by the government.
- D) All companies, domestic or foreign, are treated equal.

【2023/3】

3). Although the findings of this new study contradict standard dietary advice, they do not come as a surprise to all of the researchers involved. Dr. Rhee, one of the study authors, noted that, after 20 years of experience in the field of obesity, he has observed that people who have a regimented lifestyle and diet tend to be thinner and healthier than people with a wide variety of consumption. This anecdotal evidence matches the conclusions of the study, which found no evidence that dietary diversity promotes healthy body weight or optimal eating patterns, and limited evidence shows that eating a variety of foods is actually associated with consuming more calories, poor eating patterns and weight gain. Further, there is some evidence that a greater variety of food options in a single meal may delay people's feeling of fullness and actually increase how much they eat.

49. What did Dr. Rhee find after 20 years of research on obesity?

- A) There is no clear definition of optimal eating patterns.
- B) Diversified food intake may not contribute to health.
- C) Eating patterns and weight gain go hand in hand.
- D) Dietary diversity promotes healthy body weight.

【2022/12/21】

The answer is no. This policy is just giving money away to universities and the most affluent students in attendance. Federal Reserve data reveals that the highest-income 40 percent of households owe approximately 60 percent of outstanding student debt, while the lowest 40 percent owe just under 20 percent. This could be due to a combination of factors: students from high-income households are more likely to go to expensive colleges, less likely to receive financial aid, and more likely to have high incomes post-graduation. Plus, the majority of student debt is held by graduate degree owners, who earn approximately 25 percent more than their undergraduate counterparts. Clearly, giving free reign to banks to forgive student debt is a step in the wrong direction.

49. What do we learn from the Federal Reserve data?

- A) Approximately 60% of student debt remains unpaid.
- B) Cancelling student debt benefits wealthy families most.
- C) Forgiving student debt provides little benefit to universities.
- D) Low-income families owe the biggest amount of student debt.

2) 阅读关注——名称(短语): _____

2019/1/2

Professor Stephen Hawking has warned that the arrival of powerful artificial intelligence (AI) will be "either the best, or the worst thing that has ever happened to humans" and predicted the creation of an economic institute dedicated to "exploring the limits of intelligence as "critical to the future of our civilization as language".

46. What did Stephen Hawking think of artificial intelligence?

- A) It would be vital to the progress of human civilization.
- B) It might be a blessing or a disaster to the mankind.
- C) It might present challenges as well as opportunities.
- D) It would be a significant expansion of human intelligence.

2019/1/2

New Virgin Galactic, regulators and the public respond to this first space tragedy will determine whether and how soon private space travel can move out of playground. There is no doubt that spaceflight entails risks, and to promote a new mode of travel is to face those risks, and to reduce them with the benefit of hard-won experience.

47. What does the author think of private space travel?

- A) It is worth promoting despite the risks involved.
- B) It should not be confined to the rich only.
- C) It should be strictly regulated.
- D) It is too risky to carry on.

3) 阅读关注——名称(短语): _____

2019/1/2

In a famous study, psychologists Victoria Harner and Andrew Whalen showed two groups of test subjects—children and chimpanzees—a mechanical box with a light inside. In one condition, the box was opaque, while in the other it was transparent. The experimenters demonstrated how to open the box to retrieve the light, but they also showed that the one group of tapping on the box with a stick.

Oddly, the children carefully copied all the steps to open the box, even when they could see

that the stick had no practical effect. That is, they copied irrationally: Instead of doing only what was necessary to get their reward, children slavishly imitated every action they'd witnessed.

53. What does the author think is odd about the findings of the study by Victoria Harner and Andrew Whalen?

- A) Children irrationally imitated every action of the experimenters.
- B) Chimpanzees could tell the transparent box from the opaque one.
- C) Chimpanzees could retrieve the treat more quickly than children did.
- D) Children omitted the step of tapping on the box with a stick to open it.

2022/12/1

P6: The AAP doesn't cite positive evidence that infants actually get something out of this kind of "conversation" - the way that they clearly do from live social interaction. But there's some observational research that infants as young as six months old are emotionally engaged by playing live peekaboo (躲猫猫游戏) with *Gesellia infantis*.

P7: For infants and toddlers (学步儿童), ages 15 months to 2 years old, there's limited evidence from a couple of very small studies that they can learn new words from educational media, if and only if parents are watching alongside them, repeating what the video says and/or drawing attention to what is on the screen. In other words, treating a video or an app like a picture book is the best bet.

P8: The flip side of this is that many studies have actually shown poorer language skills correlated with earlier solo viewing of "educational" videos. There's also research that shows language delays in children who watch more TV and start watching earlier. In both cases, the problem seems to be media replacing interaction with people. For this reason, the new AAP guideline has changed from "avoid all screens under age 2" to "avoid solo media use in this age group."

54. What do researchers find about kids solo-viewing educational videos?

- A) It hinders their interest in language learning.
- B) It works no better than reading picture books.
- C) It hampers their development of language skills.
- D) It helps them acquire independent learning skills.

2021Q1

These findings suggest that ducklings use abstract relationships between sensory inputs like color, shape, sounds and odor to recognize their mothers, said Dr. Kacelnik.

By studying imprinting, the authors of this study have shown for the first time that an animal can learn relationships between concepts without training, said Jeffrey Katz, an experimental psychologist at Auburn University who was not involved in the study.

Previous studies have suggested that other animals, including pigeons, dolphins, honeybees and some primates (灵长类动物), can discern some "not different" but only after extensive training.

34. What was novel about the experiment in the study reported in Science?

- A) The ducklings were compared with other animals.
- B) It was conducted by experimental psychologists.
- C) The animals used received no training.
- D) It used a number of colors and shapes.

第二章——文章逻辑

一、特殊符号

打破折号:

两个破折号之间的信息属于____。作用____,阅读时可_____。

单破折号:_____。

【2021/12/11】Some—like an ancient Roman ship found off Antibes, France, dated between 70 and 60 BC and carrying astonishingly sophisticated gears and disks for navigating by the sun—were critical to a new understanding of our past. [位置或信义来句]

【2024/6/2】

Reality shows have come to dominate US television over the past 20 years, notes Eung Kim from Vanderbilt University. And the overwhelming majority of them have a “rags-to-riches” storyline: they feature ordinary Americans who work hard to achieve great economic success. And while these programmes are regularly among the most-watched shows, news broadcasts—which paint a more realistic view of the economic hardship faced by millions of Americans—get a much smaller proportion of the viewership.

46. What does the author say about news broadcasts in America?

- A) They attract far fewer viewers than reality TV.
- B) They are based on reporting the dark side of life.
- C) They stand in striking contrast with reality TV.
- D) They focus on Americans' economic hardships.

(2019/12/1)

Here's how the Pacific Northwest is preparing for "The Big One", the mother of all disaster strikes the what could be the worst disaster in American history. California has spent years preparing for "The Big One" —the inevitable earthquake that will undoubtedly shake all kinds of lives along the Western Seismic Fault (WSF). But when it the fault that runs along the Pacific Northwest delivers a gigantic earthquake of its own, the people of the Cascadia region have nothing to do with it. They won't be caught unaware.

20. What does "The Big One" refer to?

- A) A gigantic geological fault.
- B) A large-scale exercise to prepare for disasters.
- C) A massive natural catastrophe.
- D) A huge tsunami on the California coast.

2) 翻译：同前题

文 献 出 处

(2022/6/1)

While some critics are motivated by misguided ideas, we need to do a better job of explaining why these claims are false and why what we do is valuable. We cannot take for granted that any of this is obvious.

It is often said that elite colleges and universities do not train students, particularly those who study the liberal arts, for the workforce. But this can be refuted by scholarly research. The data are clear: a liberal arts education is great career preparation, both for excellent lifetime earnings and for satisfaction with the work. This education develops the skills of critical thinking, rigorous analysis of data and facts, communication with the written and spoken word, understanding of cultural differences and issues, and the ability to keep learning. In fact, liberal arts graduates do extremely well in every imaginable field.

21. What do the data show about elite colleges and universities?

- A) Their graduates lack the rigor required for doing statistical analysis.
- B) Their students prove to be inadequately prepared for their future careers.
- C) Their focus on research is conducive to developing students' critical thinking.
- D) Their liberal arts education enables graduates to excel in whatever field they are in.

【2022-12-3】

P4: What this means: aging is a dynamic process that could possibly be accelerated or slowed — and, in some aspects, even reversed. To an extent, it has surprised us and the rest of the scientific community that telomeres do not simply carry out the commands issued by your genetic code. Your telomeres are listening to you. The foods you eat, your response to challenges, the amount of exercise you get, and many other factors appear to influence your telomeres and can prevent premature aging at the cellular level. One of the keys to enjoying good health is simply doing your part to foster healthy cell renewal.

30. What do we learn from the last paragraph about the process of aging?

- A) It may vary from individual to individual.
- B) It challenges scientists to explore further.
- C) It depends on one's genetic code.
- D) It may be controlled to a degree.

3) 短语：引起... 作用。

【2021-12-1】

People post their lives on social media for the world to see. Facebook, Twitter, LinkedIn, and countless other social channels provide a quick and simple way to glimpse into a job candidate's personal life—both the positive and negative sides of it. Social media screening is tempting to use as part of the hiring process, but should employers make use of it when researching a potential candidate's background?

44. What does the author mainly discuss in the passage?

- A) The advantages of using social media in screening job candidates.
- B) The potentially sensitive nature of social media in everyday life.
- C) Whether the benefits of social media outweigh the drawbacks.
- D) Whether social media should be used to screen job candidates.

【2020-6-2】

The "American Dream" promises that in the Land of Opportunity, any individual can climb the economic ladder and prosper through hard work and ambition alone. And yet, young Americans today are struggling to earn more than their parents did at the same age, and upward mobility in the US actually compares unfavorably to that of other

Abstract

So why does the idea of the American Dream persist? A new study in the *American Journal of Political Science* identifies one theory that has been overlooked: the influence of reality TV.

2024年

It is inevitable that employees know the difference between right and wrong. So why don't these employees intervene when they see someone exhibiting at-risk behavior in the workplace?

There are a number of factors that influence whether people intervene. First, they need to be able to see a risky situation beginning to unfold. Second, the company's culture needs to inspire them and safe to speak up. And third, they need to have the communication skills to say something effectively.

██████████ (2022-2)

However, scientists who engage in science communication must acknowledge that even in their area, their expertise is deep but narrow. They need to recognize the constraints on their own knowledge. That is not to suggest that they only write or present on their own research, but rather, that they consult with an expert if the topic is outside of their discipline. Engaging with a scientist who works in the specialty will prevent the unintentional spread of misinformation, and the process of doing so may yield tiny pieces of interesting new information that can be incorporated.

52. What does the author advise scientists do to deal with topics outside of their specialty?

- A) Write or present on them from new angles.
- B) Utilize information from diverse sources.
- C) Turn to a specialist for professional help.
- D) Fact-check with colleagues in their field.

2023/12/11

One of the great successes of the Republican Party in recent decades is the relentless propagation of a simple formula for economic growth: tax cuts.

The formula doesn't work, but that has not affected its popularity. And while the cult of tax cuts has attracted many critics, it lacks for obvious rivals.

46. Why does the formula of tax cuts remain popular though ineffective?

- A) Its critics' voice has not been heard throughout the country.
- B) There seem to be no other options available to replace it.
- C) The cult of tax cuts has been relentlessly propagated by all policymakers.
- D) There appears to be a misunderstanding of the formula among the public.

2023/3

P1: The ability to make inferences from same and different, more thought to be unique to humans, is viewed as a characteristic of abstract intelligent thought. A new study, however, has shown that what psychologists call same different discrimination is present in creatures generally seen as unintelligent: newborn ducklings (小鸭) .

51. In what way were humans thought to be unique?

- A) Being capable of same-different discrimination.
- B) Being able to distinguish abstract from concrete.
- C) Being a major source of animal intelligence.
- D) Facing the complexity of the creative world.

3) 词组辨析

■ 责无旁贷/担责

同：become/assure/feel/hold/should/owe/ought to take credit/attributions result from
果：should/that to/hold as a result consequently account for cause lead to
contribute to result in be blamed for be responsible for

■ 作用：可用于_____题源词典

【2021/12/2】

As a result of the discrepancy between the pay rates they feel they're owed and their inflated sense of self-worth, they don't work as hard for their employer. They prefer instead to slack off. It's a tendency which many scholars believe begins in childhood due to parents who overindulge their kids. This thereby leads them to expect the same kind of spoilt treatment throughout their adult lives. And yet despite how these employees feel, it's obviously important for their manager to nonetheless find out how to keep them motivated. And, by virtue of this heightened motivation, to perform well.

30. Why don't some employees work hard according to many scholars?

- A) They lack a strong sense of self-worth
- B) They were spoiled when growing up.
- C) They have received unfair treatment.
- D) They are overindulged by their boss.

【2023/6/3】

Many oppose workplace surveillance, because of the alienating/detracting effect it has and the excessive pressure it brings. But it's on the rise around the world as firms look to become more efficient by squeezing more productivity from their workers. More than half of companies with over \$750m in annual revenue used "non-traditional" monitoring techniques on staff last year.

31. Why are many people opposed to monitoring employee performance?

- A) It puts workers under constant pressure.
- B) It is universally deemed anti-human by nature.
- C) It does both mental and physical harm to employees' motivation.
- D) It enables firms to squeeze maximal productivity from employees.

2023/6/2

Chimpanzees (黑猩猩), human beings' closest animal relatives, share up to 98% of our genes. Yet humans and chimpanzees lead very different lives. Fewer than 500,000 wild chimpanzees live in a few forested corners of Africa today, while humans have colonized every corner of the globe. At more than 7 billion, human population dwarfs that of nearly all other mammals—despite our physical weaknesses.

What could account for our species' incredible evolutionary success?

One obvious answer is our big brains. It could be that our raw intelligence gave us an unprecedented ability to think outside the box, devising solutions to thorny problems as people migrated across the globe.

51. What might explain humans' having the largest population of almost all mammals?

- A) They are equipped with raw strength for solving the most challenging problems.
- B) They cope with the outside world more effectively than their animal relatives.
- C) They possess the most outstanding ability to think.
- D) They know how to survive everywhere on earth.

3) 例句原文

■ 相关词汇: such as / like / for example / for instance / including / in particular

■ 作用: _____

■ 例证题标志词: _____

2023/6/3

Some of this data analysis can produce unexpected results. For example, it was found that people who sat at 12-person lunch tables tended to interact, share ideas more and outperform those who regularly sat at four-person tables, a fact that would probably have gone undetected without such data analysis.

53. What does the author want to show by the example of different numbers of people interacting at lunch tables?

- A) Data analysis is key to the successful implementation of workplace surveillance.
- B) Analyzing data gathered from workers can yield something unexpected.
- C) More workmates dining at a lunch table tend to facilitate interaction and idea sharing.
- D) It is hard to decide on how many people to sit at a lunch table without data analysis.

1000 (2004/12/2)

Nature exhibits some of the universal aesthetic features, such as balance, in a common way throughout the world. It's not exactly the same everywhere, but it is common. For example, a sunset is similar enough in different places to warrant almost universal appeal.

94. What does the example of sunset tell about nature?

- A) It evokes a powerful appeal through its brilliant radiance.
- B) It displays aesthetic unity in a similar way the world over.
- C) It embodies beauty with a wide array of aesthetic features.
- D) It establishes the principles of beauty in a number of ways.

1000 (2004/1/1)

P6 The achievability of universal 100% renewable energy is similarly contentious. Cities such as Burlington, Vermont, have been "100% renewable" for years. But these cities often have small populations, consequently still rely on fossil fuel energy and have significant nonrenewable resources in their immediate disposal. Meanwhile, countries that manage to run off renewables typically do so thanks to extraordinary hydroelectric capabilities.

95. What point does the author want to make with cities like Burlington as an example?

- A) It is controversial whether the goal of the whole world's exclusive dependence on renewables is attainable.
- B) It is uncertain whether cities with large populations have renewable resources at their immediate disposal.
- C) It is arguable whether cities that manage to run off renewables have sustainable hydroelectric capabilities.
- D) It is debatable whether traditional fossil fuel energy can be done away with entirely throughout the world.

第三章——选项特征

一、正确选项特征

L 原文替换

周_____在阅读原文中。

12021/12/11

Screening job candidates on social media must be done professionally and responsibly. Companies should stipulate that they will never ask for passwords, be consistent, document decisions, consider the source used and be aware that offer letters may apply. In light of this it is probably best to look later in the process and ask human resources for help in navigating it. Social media is hard to say. But before using social media to screen job candidates, consulting with management and legal experts beforehand is essential in order to comply with all laws.

58. What does the author suggest doing before screening job candidates on social media?

- A) Hiring professionals to navigate the whole process.
- B) Announcing potential risks involved in the process.
- C) Seeking advice from management and legal experts.
- D) Stipulating a set of rules for asking specific questions.

12019/12/13

Rising temperatures and overfishing in the pristine (未被污染的) waters around the Antarctic could see king penguin populations pushed to the brink of extinction by the end of the century, according to a new study. The study's report states that as global warming transforms the environment in the world's last great wilderness, 70 percent of king penguins could either disappear or be forced to find new breeding grounds.

42. What will happen by 2100, according to a new study?

- A) King penguins in the Antarctic will be on the verge of dying out.
- B) Sea water will rise to a much higher level around the Antarctic.
- C) The melting ice cover will destroy the great Antarctic wilderness.
- D) The polar ice around the Antarctic will disappear forever.

3. 仔细阅读

常见形式包括_____。

【2024/1】

Selective colleges and universities in the U. S. are under fire for being too elite and too expensive, and for not training graduates for the world of work. Such charges ignore the fact that these institutions continue to prepare students for success in their work, for thoughtful engagement in civic life, for lifelong learning, and for understanding the world and their role within it.

44. What fact does the author emphasize concerning selective colleges and universities?

- A) They have been ignoring the training of graduates for the world of work.
- B) They have been doing well in ensuring their students a successful future.
- C) They have been consistently criticized for being too elite and too expensive.
- D) They have been actively engaged in civic life beyond the school campus.

【2023/4】

These colleges and universities may be doing something right. Applications are at record highs, and their financial aid programs make them more accessible than ever. This model of education has long played a central role in creating opportunity, driving economic growth and sparking innovation.

45. What does the author say is arguing for the model of education in the U. S.?

- A) It has contributed substantially to the nation's overall development.
- B) It has succeeded in maintaining sustainable financial aid programs.
- C) It has given priority to innovative programs for graduate studies.
- D) It has played a central role in attracting international applicants.

二、阅读理解题

1. 无中生有

原文_____而选项_____。
尤其注意：_____。

2024/6/2

P1 When someone asks us 'what do you do?' we nearly always reply with our occupation. Work, for many of us, is much more than a job. It is the defining aspect of our identity. For many of us it is through our job that we can define ourselves.

P2 "Without my job I don't know who I am," is a sentence that has been uttered on more than a handful of occasions from my office chair. Indeed, it can be one of the most challenging aspects I work on with clients who have lost or been forced into changing their jobs. This loss provokes an identity crisis much greater than the loss of the job itself.

Q1. What do we learn from the passage about one's loss of a job?

- A) It compels them to visit a clinical psychologist.
- B) It offers them a chance to play different roles.
- C) It renders them puzzled about who they are.
- D) It forces them to redefine their life's goals.

2024/6/2

P3 One of the things I have come to understand, however, is that our identity is much more complex than we recognise at first glance. If we take the time to reflect we might recognise that as well as our work we can also identify as a friend, a spouse, a son or daughter, a parent, a member of a sports team or religious community. We may recognise that we feel and act differently in these roles and relationships than we do at work. The passive daughter becomes an assertive leader at work. Furthermore, our identities at work are not fixed. They change over time. I myself have been a shop assistant, a waitress, a student, a graduate, and a clinical psychologist. At each stage my ability to adapt to and develop my career identity has been crucial to my wellbeing. Whilst we like to eliminate uncertainty in our lives at some level we have to manage uncertainty, especially in today's volatile and ever-shifting job market.

23. What does the passage say about our identities at work?

- A) They are essential to our self-esteem.
- B) They evolve with the passage of time.
- C) They outweigh all other self-perceptions.
- D) They are key to understanding ourselves.

2. 仔细阅读

24. Alternatively, when a person stops voicing negative comments, especially sarcastic ones, they may even start to feel happier and more self-confident. Also, other people in their life benefit even more because they no longer have to hear the emotionally harmful language of sarcasm.

25. What does the author say about people quitting sarcastic comments?

- A) It makes others happier and more self-confident.
- B) It reminds them of being irritating and bullying.
- C) It benefits not only themselves but also those around them.
- D) It shields them from negative comments and criticisms they

2019年12月

Opacids is what's known as a "megathrust" fault. Mega thrusts are created at earthquake zones and plate boundaries where two plates converge. In the areas where one plate is beneath another, stress builds up over time. During a megathrust event, all of that stress releases and some of the world's most powerful earthquakes occur. Remember the 9.1 earthquake and tsunami in the Indian Ocean off Sumatra in 2004? It was caused by a megathrust event as the India plate moved beneath the Burma plate.

26. What happens in case of a megathrust earthquake according to the passage?

- A) Two plates merge into one.
- B) A variety of forces converge.
- C) Boundaries like converging plates.
- D) Enormous stress is released.

3. 听力理解

P10 "Understanding the impact of variability is important for literally every aspect of our daily life. Beyond affecting the way we learn language, motor skills, and categories, it even has an impact on our social lives," explains Raviv. "For example, face recognition is affected by whether people grew up in a small community or in a larger community. Exposure to fewer faces during childhood is associated with diminished face memory."

54. What does the passage say about face recognition?

- A) People growing up in a small community may find it easy to remember familiar faces.
- B) Face recognition has a significant impact on literally every aspect of our social lives.
- C) People growing up in a large community can readily recognize any individual face.
- D) The size of the community people grow up in impacts their face recognition ability.

2020/9/第 2

The business news website Quartz held Saeed up as an inspiration, writing that if only we allowed her "actually extremely blooming" example of industrious sleeplessness, we would be quick to see results.

47. What did the business news website Quartz say about Doreen Saeed?

- A) She could serve as an example of industriousness.
- B) She proved we could liberate ourselves from sleep.
- C) She could be an inspiration to novelists all over the world.
- D) She showed we could get all our work done without sleep.

2023/6/1

Recommendation engines, which are increasingly prevalent intermediaries in people's conception of culture, may serve to constrain choice and minimize luck. By presenting consumers with algorithmically selected choices of what to watch, read, stream and visit next, companies are replacing human taste with machine taste. In one sense, this is helpful.

Questions

After all, machines can survey a wider range of choices than any individual is likely to have the time or energy to do on their own.

48. What may result from liberating applications of recommendation engines in our consumption of culture?

- A) Consumers will have much limited choice.
- B) Consumers will actually enjoy better luck.
- C) It will be easier to decide on what to enjoy.
- D) Humans will develop tastes similar to machines.

选项出境_____。慎重选择。

【2020/7】

Rapp works long hours and sleeps only five to seven hours a night but he said he only gets sick once a year. For him, the difference between day-to-day stress, like the kind we feel when moving apartments, and positive stress is that the latter involves pushing the body to extremes and forcing it to build up a tolerance.

40. What can be inferred from the passage about day-to-day stress?

- A) It is harmful to one's physical and mental health.
- B) It does not differ in essence from positive stress.
- C) It is something everybody has to live with.
- D) It does not help build up one's tolerance.

【2022/6/3】

Not all psychologists agree. Those're gladly working hand in glove with a \$120-a-year industry that has turned the manipulation of adult emotions and desires into an art form—often literally. It's also one that's forever developing new ways to persuade our children to desire material possessions, and because of advertisements' viral effect they only need to infect a few to reach the many. Advertising and marketing can serve a useful purpose for

children. Marketing may help socialize children as consumers, inform them about products and help them serve out unique identities as they reach adulthood.

49. What does the author imply about the impact of advertising?

- A) It is usually infectious to many rather than a few.
- B) It is rooted in our desire for material possessions.
- C) It is comparable to that of violence.
- D) It is directly limited to children.

二、填空题

1. 回答问题

请写关键词: main idea/ mainly discuss/ writing purpose

取词:

What is the main idea of the first paragraph?

What is the author's purpose in writing the passage?

2. 补全段落

地点____, 人物____, 再背____, _____

Section 2 (2018年卷2)

There're currently 21.5 million students in America, and many will be finding their college on borrowed money. Given that there's now over \$1.5 trillion in student loans on the books, it's pretty clear that many students are far from sensible. The average student's debt after graduation now approaches \$40,000, and as college tuition continues to rise, it's expensive to make it "free" for multiplying. Even Hillary Clinton said "student loans are the new opiate." "Camp won't be a heroin."

But the only way college could be free is if the faculty and staff donated their time, the buildings required no maintenance, and computers required no electricity. As long as it's impossible to produce something from nothing, costs are absolutely present.

The actual question we debate is who should pay for people to go to college. If taxpayers are to bear the cost of financing student loans, shouldn't they have a say about how the money is used?

At least employers should be able to decide what students will study on the public dime. It

we're going to force taxpayers to foot the bill for college degrees, students should only study those subjects that're of greatest benefit to taxpayers. After all, students making their own choices in this respect is what caused the problem in the first place. We simply don't need more poetry, gender studies, or sociology majors. How do we know which subjects benefit society? Easy.

Average starting salaries give a clear indication of what type of training society needs its new workers to have. Certainly, there're benefits to a college major beyond the job a student can perform. But if we're talking about the benefits to society, the only thing that matters is what the major enables the student to produce for society. And the value of what the student can produce is reflected in the wage employers are willing to pay the student to produce it.

A low wage for elementary school teachers, however, doesn't mean elementary education isn't important. It simply means there're too many elementary school teachers already. Meanwhile, there're few who're willing and able to perform jobs requiring a petroleum engineering major, so the value of one more of those people is very high. So we can have taxpayers pick up students' tuition in exchange for dictating what those students will study. Or we can allow students both to choose their majors and pay for their education themselves. But in the end, one of two things is true: Either a college major is worth its cost or it isn't. If yes, taxpayer financing isn't needed. If not taxpayer financing isn't desirable. Either way, taxpayers have no business paying for students' college education.

51. What does the author think of college students funding their education through loans?

- A) They only expect to get huge returns.
- B) They benefit at taxpayers' expense.
- C) They are acting in an irrational way.
- D) They will regret doing so someday.

55. What message does the author want to convey in the passage?

- A) Students should think carefully whether to go to college.
- B) Taxpayers should only finance the most gifted students.
- C) The worth of a college education is open to debate.
- D) College students should fund their own education.

三、听力题

1. 听力原文: _____

2. 做题方法: _____

2016/12/13

"About once a week, I have a hunch that will bring up a new certification I've never even heard of and I'm in this industry," said Kevin Wilhelm, chief executive officer of Sustainable Business Consulting. "It's kind of a Wild West, anybody can claim themselves to be green." Mr. Wilhelm said the excess of labels made it difficult for businesses and consumers to know which labels they should pay attention to.

21. What does Kevin Wilhelm imply by saying "It's kind of a Wild West" (Line 3, Para. 1)?

- A) Businesses attempt to produce green products
- B) Each business uses its own way to green labeling
- C) Consumers grow wild with products labeled green
- D) Anything produced in the West can be labeled green

2016/12/13

Teenagers at risk of depression, anxiety and suicide often wear their troubles like a neon (霓虹灯) sign. Their risky behaviors — drinking too much alcohol, using illegal drugs, smoking cigarettes and skipping school — can alert parents and teachers that serious problems are brewing.

But a new study finds that there's another group of adolescents who are in nearly as much danger of experiencing the most psychiatric symptoms. Teens who use lots of media, don't get enough sleep and have a sedentary (不爱运动的) lifestyle.

22. What does the author mean by saying "Teenagers at risk of depression, anxiety and suicide often wear their troubles like a neon sign" (Lines 1-2, Para. 1)?

- A) Mental problems can now be found in large numbers of teenagers
- B) Teenagers' mental problems are getting more and more attention
- C) Teenagers' mental problems are often too conspicuous not to be observed
- D) Depression and anxiety are the most common symptoms of mental problems

Directions: In this section, you are going to read a passage with ten statements attached to it. Each statement contains information given in one of the paragraphs. Identify the paragraph from which the information is derived. You may choose a paragraph more than once. Each paragraph is marked with a letter. Answer the questions by marking the corresponding letter on Answer Sheet 2.

2. 阅读策略: _____
(23年6月)

Why we need the colleges

...

- D) I've had the privilege of teaching at three different institutions of higher learning during my career—a small liberal arts college and two mid-sized public universities. I've also been profoundly disappointed in each of these institutions, and in many of my colleagues, especially when it comes to helping students and preparing them for the many responsibilities of adulthood. Administrators focus on the business of running a university, and most faculty focus on their scholarship and teaching their discipline. Little deliberate attention is given to how students mature as individuals and social

being.

- B) Having just retired from teaching at a public university, I'm now returning to my hometown of Flagstaff, Arizona, to establish a tiny college—Flagstaff College. I'm convinced that there's a need for another type of education, one devoted to helping students come into their own and learn this beautiful and troubled world. Young people need an education that will provide them with meaning, hope, courage, and passion, as well as information and skills. Large institutions, I believe, are particularly ill-suited to this type of education.
- C) With only 26 students, Deep Springs is the smallest college in the country and quite likely, the most atypical. (李典國的) Located on a working cattle ranch on the California-Nevada border, Deep Springs is a private, residential, two-year college for men, committed to educating students for "a life of service to humanity." Founded by the electricity tycoon (大亨) L. L. Smith in 1912, Deep Springs' "curriculum" revolves around academics, labor, and self-governance. In addition to their courses, students are charged with running the 155-acre ranch and overseeing the functioning of the college. Students elect both the admissions and the curriculum committees.

36. Our tiny American college situated on a cattle farm is devoted to educating students to serve mankind throughout their lives.

37. Thanks to the author's disappointment, the three institutions of higher learning where she taught largely ignore students' growth as social beings.

44. After her retirement, the author has decided to set up a tiny college in her hometown.

二、阅读理解

2024/12/2

What is a paper blood wolf moon?

- A) Blue moons, rare moons, supermoons. For some regions all the =ebates seem to think you really want to know all about these moons. Catch This Weekend's AMAZING SUNRISE MOON," one headline will announce. "The Supermoon Isn't Actually A Big Deal And You're All Missing Astronomy," another will complain.
- B) The latest example is the paper blood wolf moon eclipse which sounds like the name of

an emotional song I would have performed a modern dance routine to in 9th grade, but is, in fact, an astronomical event set to occur on January 20. As we'll explain below, there is nothing truly mysterious or otherwise special about this moon, and it will not look like a bloody wolf head in the sky or anything wild like that. We get these super lunar events by strapping together all the qualifiers we've historically used to keep track of full moons throughout the year, and in the age of the internet we can get a little too enthusiastic.

- C) Consider this your go-to resource for all moon-gazing news. Here's what you need to know about the latest lunar event.
- D) Look, it's okay if you don't know. There are probably loads of folks who walk around pretending they totally know why *that* thing in the sky seems to get bigger and smaller at regular intervals but who totally do not.
- E) The moon orbits Earth, and it's tidally locked - that means it always shows us the same face, instead of spinning around like our planet does. That's why you can always see the man on the moon (or the moon rabbit, depending on your cultural preferences) even as it spins around us. But while the moon is big and bright in the sky when it's full, that's only because it's reflecting light from the sun. But the moon is always moving, so it's getting hit with sunlight at different angles. It's invisible to us during the new moon, because our satellite is perched right between us and the sun; the so-called dark side of the moon is lit up like Las Vegas, but the side we can see is in shadow. A full moon happens when the earth is right between the sun and the moon, so sunlight hits the part we can see. And all the other phases are just the transition from one of those extremes to the other.
- F) The moon isn't always exactly the same distance from Earth, because its orbit isn't perfectly circular. We call the closest point perigee (近地点), and the most distant point is apogee (远地点). 2018's closest perigee and most distant apogee both happened in January, and the difference was about 30,000 miles.
- G) The reason you care about this ordinary change in distance is that it turns a moon super. When a full moon happens close to perigee, it's going to look a bit bigger. Honestly, the difference is not that profound, but if you're in a position to photograph the supermoon next to something that shows the slight increase in scale, it can look pretty cool. January's super blood wolf moon eclipse is epic because the date lines up with the

about the moon will get to us during January, but the moon won't actually be at its closest for the year until February's supermoon - which you can expect plenty of media attention over.

- 11) Blood moons only occur during total lunar eclipses - which can happen a few times a year in any given location. When the moon dips through our shadow, we give it a reddish coloring. The moon may also look orange - whether it's rising or setting or if a large low in the horizon all night - the light bouncing off of it has to travel through a thicker atmosphere than, which causes more blue light away. But you'll probably only see that deep, crimson red during an eclipse.

- 12) A lot of headlines about moons are just ridiculous. You do not need to be particularly excited about a blue moon, it just looks like a regular full moon, but you should definitely call out of bed to look at a blood moon if one is going to be visible in your region, even though they're just lunar eclipses and not evidence of bloody battles between the sky gods.

- 13) In March of 2012, we lost our second "blue moon" of the year to much acclaim. And while that's not necessarily spending in an oh - yeah - get - out - and - look - at - it way, it's certainly spend a blue moon has a chance for when two full moons fall in the same calendar month, and we hadn't previously had one in one year since 1999. We won't have it happen again until 2037. Astronomer David Chapman explained that this is really a peculiarity of our calendar: once we stopped doing things based on the moon and started trying to follow the sun and the seasons - we stopped having one reliable full moon per month. The moon cycle is 29.53 days long on average, so in most months we still end up with a single new moon and a single full one. But every once in a while, one month ends a full moon from another. In 2012 - and in 1999, and again in 2037 - both January and March started full moons on the first and last nights of the month, leaving February in the lurch.

- 14) Getting two blue moons a year is rare, but we have individual blue moons every few years. Also, the first one actually isn't. A moon can indeed take on a rosy blue color, but this only happens when particles of just the right size disperse through the sky - and it has nothing to do with the moon's color or "blue". Big clouds of ash from volcanic eruptions or forest fires can do this trick, but it doesn't happen often, and the moon would certainly have to align for two such rare instances to occur at once.

L) You may have heard that the super special second blue moon of 2018 was also a Partial moon. This is true! That just means it was the first full moon of spring, which is often used to determine the date of Easter Sunday. All of this is just calendar nonsense and we refuse to go into it further.

M) Sometimes you'll see a headline that promises a moon with so many qualifiers it makes your head spin. A super blue blood moon season, perhaps? Or a super blood wolf moon? Lots of websites will tell you that "wolf moon" is the traditional name of the first full moon of the year to "Native American" cultures, which is kind of a weird thing to claim given that there are 373 registered Tribal Nations in the U.S. alone today, not to mention historically. The idea that hungry, howling wolves were such a universal constant in January that all of North America with its different cultures, geographies, and languages spontaneously came up with the same nickname is illogical.

N) Many cultures have traditional names for the full moon in a given month or season, so there's quite a bit to draw from if you're trying to really juice up a story on a slightly - bigger - than - average view of the moon. But these are all based on human calendars and activities and folklore; you will not go outside and see a pink moon in April, though I wish it were so.

36.We cannot see the moon at times when it is positioned right between the earth and the sun.

37.Volcanic eruptions may cause the moon to assume a moody blue color.

38.The moon will be closest to the earth when the supermoon occurs in February.

39. There is nothing unusual about the super blood wolf moon, which will bear no resemblance to a bloody wolf head.

40. The moon will appear orange when the light reflecting from it travels through an atmosphere thicker than usual.

41. It is contrary to logic to claim the name of wolf moon originates from the cultures of American Indians.

42.As the moon's orbit is not a hundred - percent circle, its distance from the earth changes.

43.A full moon in a given month or season gets a specific name in different cultures.

44. There are likely lots of people who know absolutely nothing about why the moon appears to change its size regularly but act like they know.

45.When a full moon appears twice in the same month, it is nicknamed a blue moon.

Continuing Rush for Upper Hand in Antarctica

36. According to Chinese officials, their activities in Antarctica lay greater emphasis on scientific research.
37. Efforts to create one of the world's largest ocean structures failed because of Russia's obstruction.
38. With several monitoring stations operating in Antarctica, Russia is trying hard to counter America's dominance in the field of worldwide navigational facilities.
39. According to geologists' estimates, Antarctica has enormous reserves of oil and natural gas.
40. It is estimated that Antarctica boasts of the richest reserves of fresh water on earth.
41. The demand for energy resources may prompt transportation of Antarctic resources before their depletion.
42. Many countries are moving against each other to enlarge their business and strategic influence on Antarctica.
43. Antarctica's harsh natural conditions constitute huge obstacles to the exploitation of its resources.
44. With competition from many countries, Antarctica is no longer dominated by the traditional white nations.
45. Antarctic scientists complain about lack of sufficient funds and equipment for their expansion in Antarctica.

南极洲

Country Risk for Upper Hand in Antarctica

A) On a glacier-filled island with fjords (峡湾) and elephant seals, Russia has built Antarctica's first Orthodox church on a hill overlooking its research base. Less than an hour away by snowmobile, Chinese laborers have updated the Good Will Station, a vital part of China's plan to operate five bases on Antarctica, complete with an indoor badminton court and sleeping quarters for 150 people. Not to be outdone, India's futuristic new Bharat base, built on hills (丘) using 154 interlocking shipping containers, resembles a spaceship. Turkey and Iran have announced plans to build bases, too.

B) More than a century has passed since explorers raced to plant their flags in the bottom of the world, and for decades to come this ocean is supposed to be protected as a scientific preserve, shielded from intrusions like military competition and mining. But so many of countries are rushing to assert greater influence here, with an eye not just towards the dry those prospective energy capricious, but also for the strategic and commercial opportunities that already exist.

C) The newer players are stepping into what they view as a treasure house of resources. Some of the southern focus on the Antarctic resources that are already up for grabs. It's abundant sea life. South Korea, which operates state-of-the-art bases here, is increasing its fishing of krill (磷虾), found in abundance in the Southern Ocean, while Russia recently frustrated efforts to create one of the world's largest ocean sanctuaries here.

- D) **Force scientists are examining the potential for harnessing Antarctica's fresh water**, which is estimated to have the biggest reserves of fresh water on the planet. Nations are also pressing ahead with space research and satellite projects to expand their global navigation abilities.
- E) **Justifying an Antarctic base**, Russia is expanding its monitoring stations for Okeanos, its version of the Global Positioning System (GPS). At least three Russian stations are already operating in Antarctica, part of its effort to challenge the dominance of the American GPS, and new stations are planned for sites like the Russian base on the shadow of the Cathedral Church of the Holy Trinity.
- F) **Blurborn in Antarctica**, Russian researchers boast of their recent discovery of a *Spizomys* mouse, the size of Lake Ontario after drifting through miles of solid ice. "You can see that we're here to stay," said Vladimir Cheberdak, 57, chief of the Bellingshausen Station, as he slipped sea under a portrait of Fabian Gottlieb von Bellingshausen, a high-ranking officer in the Imperial Russian Navy who explored the Antarctic coast in 1820.
- G) **Antarctica's mineral, oil and gas wealth** are a longer-term prize. The treaty banning mining here, shielding around 400,000 reserves of iron ore, coal and aluminum, comes up for review in 2048. Researchers recently found kimberlite (金刚石) deposits hinting at the existence of diamonds. And while assessments vary widely, geologists estimate that Antarctica holds at least 40 billion barrels of oil and natural gas.
- H) **Beyond the Antarctic frontier**, huge obstacles persist in tapping these resources, like drilling technology that could jeopardize offshore platforms. Then there is Antarctica's remoteness, with some mineral deposits found in inhospitable locations on a continent that is larger than Europe and whose water temperatures hover around minus 35 degrees Celsius.
- I) **But advances in technology** might make Antarctica a lot more accessible three decades from now. And even before then, nations warn, the demand for resources in an energy-hungry world could drive pressure to outpace Antarctic treaties, possibly allowing some commercial endeavors long well before the prohibitions against them expire. The summer visitors on King George Island offer a glimpse into the long game on this ice-dotted continent as nations open themselves, eroding the sway long held by

countries like the United States, Britain, Australia and New Zealand.

- 2) Being outposted in Antarctica involves adapting to life on the planet's driest, windiest and coldest continent, yet such nations manage to make itself at home. Bearded Russian priests offer regular services at the Orthodox church for the 14 or so Russian speakers who spend the winter at the base, largely polar scientists in fields like glaciology and meteorology. Their number climbs to about 40 in the warmer summer months. China has arguably the fastest-growing operations in Antarctica. It opened its fourth station last year and is pressing ahead with plans to build a fifth. It is building its second ice-breaking ship and setting up research drilling operations on an ice dome 17,421 feet above sea level that is one of the planet's coldest places. Chinese officials say the expansion in Antarctica prioritizes scientific research, but they also acknowledge the concern about "resource security" influence their moves.
- 3) China's newly reopened Great Wall Station on King George Island makes the Russian and Chinese bases here seem outdated. "We do weather monitoring here and other research," Ning Xu, 53, the chief of the Chinese base, said over tea during a December blizzard (暴风雪) in late November. The large base he leads resembles a serviced-in college campus on holiday break, with the capacity to sleep more than 10 times the 13 people who were staying on through the Antarctic winter. Yong Yu, a Chinese meteorologist, showed off the spacious building, with empty desks under an illustrated timeline detailing the rapid growth of China's Antarctic operations since the 1980s. "We now feel equipped to grow," he said.
- 4) As some countries expand operations in Antarctica, the United States maintains three year-round stations on the continent with more than 1,000 people during the southern hemisphere's summer, including those at the Amundsen-Scott station, built in 1956 at an elevation of 9,301 feet on a plateau at the South Pole. But US researchers quietly complain about budget restraints and having far fewer resources than Russia. Limiting the reach of the United States in Antarctica.
- 5) Scholars warn that Antarctica's political drift could blur the distinction between military and civilian activities long before the continent's frontiers come up for renegotiation, especially in parts of Antarctica that are ideal for intercepting (拦截) signals from satellites or re-emitting satellite systems, potentially enhancing global electronic intelligence operations.

10) Some nations have had a hard time here. Brazil opened a research station in 1964, but it was largely destroyed by a fire that killed two members of the navy in 2012, the same year that a diesel-engine Brazilian barge sank near the base. As if that were not enough, a Brazilian C-130 Hercules military transport plane has remained stranded near the runway of Chile's air base here since it crash-landed in 2014.

11) However, Brazil's search of Antarctica has created opportunities for China, with a Chinese company winning the \$106 million contract in 2015 to rebuild the Brazilian station.

12) Apart from the changes, Antarctica maintains its allure. South Korea opened its second Antarctic research base in 2014, describing it as a way to test robots developed by Korean researchers for use in extreme conditions. With Russia's help, Belarus is preparing to build its first Antarctic base. Colombia said this year that it planned to join other South American nations with bases in Antarctica.

13) "The old days of the Antarctic being dominated by the interests and wishes of what were then Europe, Australasia and North American states are over," said Klaus Dodds, a politics scholar at the University of London who specializes in Antarctica. "The reality is that Antarctica is geopolitically contested."

14. According to Chinese officials, their activities in Antarctica lay greater emphasis on scientific research.

15. Efforts to secure one of the world's largest ocean sanctuaries failed because of Russia's objection.

16. With almost no military presence in Antarctica, Russia is trying hard to gain an American dominance in the field of worldwide maritime facilities.

17. According to geologists' estimates, Antarctica has enormous reserves of oil and natural gas.

18. It is estimated that Antarctica boasts one of the richest reserves of fresh water on earth.

19. The demand for energy resources may compel reevaluation of Antarctica's treaties before their expiration.

20. Many countries are looking against each other to increase their business and strategic influence on Antarctica.

21. Antarctica's harsh natural conditions constitute huge obstacles to the exploration of its

resources.

44. With competition from many countries, Antarctica is no longer dominated by the traditional white nations.

45. American scientists complain about lack of sufficient money and equipment for their expeditions in Antarctica.

真题练习(2023/12/1)

The desert is deserving. At first glance it looks arid and _____, but if you look closely, you must probably beaming through the Mojave on the way to Las Vegas or heading towards the Grand Canyon, it's just a _____ of some mountains in the distance and more _____ to be a sunny hot day in the heart of the state. The desert, however, is _____ with life, mystery, and magic.

The Mojave desert sits less than two inches of rain a year, and into the desert is a land

of __29__ . Temperature fluctuations vary from freezing to __30__ hot, not only between seasons, but even within the same day.

At the heart of this vast, 25,000-square-mile desert is Mojave National Preserve. The 100s managing and working there wear the wide-brimmed (宽边的) hats that have become __31__ with places like Yosemite.

The preserve is rich with history, culture, biodiversity, and endless opportunities to __32__ your interests, especially for anyone who loves the outdoors. For a photographer, it requires patience and __33__ a few spare tires to traverse the network of capered "roads" . but the rewards are plenty.

Photographing here requires a good __34__ pair of shoes and a lot of preparation. Plenty of water, spare tires, and a full tank of gas are needed to explore this unit of the national park system, which is the third largest in the country.

Like all deserts, though, if you are patient, you will be rewarded, as they often reveal their secrets slowly. During my last outing, I was surprised to see how much of the area was shaped by ancient volcanic and geological forces, much of which remains today, giving the area a __35__ feel and painting a colorful background for great photographs.

A) apt adj. 有…倾向的

B) burning v+ing 燃烧

C) extreme n. 极端事件

D) flat n. 平的

E) fraction n. 分数, 小部分

F) overflowing v+ing 溢出

G) parasite n. 寄生虫

H) probably adv. 大概, 或许

I) sparingly adv. 一点点, 节俭地

J) sprinkle v. 洒, 西

K) steer v. 驾驶, 引导

L) stimulate v. 促进, 激发

M) steady a. 稳定的, 坚定的

N) synonym n. 同义的, 同义词的

O) unique a. 独一无二的

大題閱讀——綜合練習

[2023-3] passage 1 多样化饮食的益处性

PI: The suggestion that people should aim for dietary diversity by trying to eat a variety of foods has been a basic public health recommendation for decades in the United States and elsewhere. Now, however, experts are warning that aiming for a diverse diet may actually lead to just eating more calories, and, thus, to obesity. One issue is that people may not interpret “variety” the way nutritionists intend. This problem is highlighted by new research conducted by the American Heart Association. Researchers ...

46. What has been a standard piece of dietary advice for decades?

- A) People should diversify what they eat.
- B) People should have a well-balanced diet.
- C) People should cultivate a healthy eating habit.
- D) People should limit calorie intake to avoid obesity.

PI: ... Now, however, experts are warning that aiming for a diverse diet may actually lead to just eating more calories, and, thus, to obesity. One issue is that people may not interpret “variety” the way nutritionists intend. This problem is highlighted by new research conducted by the American Heart Association. Researchers reviewed all the evidence published related to dietary diversity and not a correlation between dietary diversity and a greater intake of both healthy and unhealthy foods. This had implications for obesity, as researchers found a greater prevalence of obesity among people with a greater dietary diversity.

47. What did the new research by the American Heart Association find?

- A) Unhealthy food makes people gain weight more easily.
- B) Dietary diversity is positively related to good health.
- C) People seeking dietary diversity tend to eat more.
- D) Big eaters are more likely to become overweight.

P2: One author of the new study explained that their findings contradict standard dietary advice, as most dietary guidelines around the world include a statement of eating a variety of foods. But this advice does not seem to be supported by science, possibly because there is little agreement about the meaning of "dietary diversity," which is not clearly and consistently defined. Some experts measure dietary diversity by counting the number of food groups eaten, while others look at the distribution of calories across individual foods, and still others measure how different the foods eaten are from each other.

48. What could help to explain the contradiction between the new findings and the common public health recommendation?

- A) There is little consensus on the definition of dietary diversity.
- B) The methods researchers use to measure nutrition vary greatly.
- C) Conventional wisdom about diet is seldom supported by science.
- D) Most dietary guidelines around the world contradict one another.

P3: Although the findings of this new study contradict standard dietary advice, they do not come as a surprise to all of the researchers involved. Dr. Rao, one of the study authors, noted that, after 20 years of experience in the field of obesity, he has observed that people who have a regimented lifestyle and diet tend to be thinner and healthier than people with a wide variety of consumption. This anecdotal evidence matches the conclusions of the study, which found no evidence that dietary diversity promotes healthy body weight or optimal eating patterns, and limited evidence shows that eating a variety of foods is actually associated with consuming more calories, poor eating patterns and weight gain. Further, there is some evidence that a greater variety of food options in a single meal may delay people's feeling of fullness and actually increase how much they eat.

49. What did Dr. Rao find after 20 years of research on obesity?

- A) There is no clear definition of optimal eating patterns.
- B) Diversified food intake may not contribute to health.
- C) Eating patterns and weight gain go hand in hand.
- D) Dietary diversity promotes healthy body weight.

P3: → he has observed that people who have a regimented lifestyle and diet tend to be thinner and healthier than people with a wide variety of consumption. This anecdotal evidence contradicts the conclusions of the study, which found no evidence that dietary diversity produces healthy body weight or optimal eating patterns, and limited evidence shows that eating a variety of foods is actually associated with consuming more calories, poorer eating patterns and weight gain. Further, there is some evidence that a greater variety of food options in a single setting may delay people's feeling of fullness and actually increase how much they eat.

Q4: What does the passage say about people who eat a great variety of food?

- A) They are more likely to eat foods beneficial to their health.
- B) They don't have any problems getting sufficient nutrition.
- C) They don't feel they have had enough until they've eaten.
- D) They tend to consume more calories, sugar and red meat.

[2022-12-21] passage 2 12-2022-12-21

P1: Some people in the US have advocated that forgiving student loan debt is one way to stimulate the economy and give assistance to those in need. One government proposition is to eliminate \$10,000 of debt for 'economically distressed' students. Some in US Congress have gone so far as to suggest forgiving up to \$50,000 in debt per student borrower, but data suggests forgiving student debt not only isn't helping the economically distressed.

Q5: Why do some people advocate forgiving student loan debt?

- A) They think it will narrow the gap between the wealthy and the poor.
- B) They believe it will benefit both the economy and the underprivileged.
- C) They claim it will stimulate economic distress among college students.
- D) They think the cost of education is the responsibility of the government.

P2: The answer is no. This policy is just giving money away to universities and the most affluent students in attendance. Federal Reserve data reveals that the highest-income 40 percent of households owe approximately 60 percent of outstanding student debt, while the lowest 40 percent owe just under 20 percent. This could be due to a combination of factors, students from high-income households are more likely to go to expensive colleges, less likely to receive financial aid, and more likely to have high incomes post-graduation. Plus,

the majority of student debt is held by graduate degree earners, who earn approximately 25 percent more than their undergraduate counterparts. Clearly, giving free reign to banks to forgive student debt is a step in the wrong direction.

47. What do we learn from the Federal Reserve data?

- A) Approximately 60% of student debt remains unpaid.
- B) Cancelling student debt benefits wealthy families most.
- C) Forgiving student debt provides little benefit to universities.
- D) Low-income families owe the biggest amount of student debt.

P4: This attempt to address the fact that Congress previously mentioned student loan forgiveness plan largely helps out the wealthy, but is an adverse incentive for universities to keep raising tuition and for students to choose to major in low-earning degree programs. Colleges have no reason to make their programs more affordable if they believe students will just take out more debt. And, students will feel more comfortable making the irresponsible decision to go into thousands of dollars in debt to major in impractical or idealistic subjects if they know their loans will be forgiven.

48. What does the author say students are likely to do if they know they won't repay their loans?

- A) They will choose to study subjects without considering their job prospects.
- B) They will be free to pursue their goals without being burdened financially.
- C) They will over-borrow and live beyond their means.
- D) They will be able to enroll in expensive universities.

This is especially concerning given the pandemic (大流行病) has rendered a college education practically worthless. Students are paying tens of thousands of dollars per year to live at home and be lectured on the Internet. Do we really want to tell colleges that they can get away with providing below-average service for an outrageous cost?

49. What does the author imply about colleges offering online education?

- A) They cannot get away with the serious consequences.
- B) They have suffered greatly from the current pandemic.
- C) The tuition they charge is not justified by the quality of their service.
- D) The tuition they charge has jumped enormously during the pandemic.

P6: In the case of any of these student debt plans, working-class Americans, who chose not to or could not afford to go to college will be subsidizing the education of the professional class. Planners and retail workers will be paying for the degrees of doctors and lawyers.

P7: The US government's effort to help those in debt is commendable but is this really the solution that will help the poor financially recover?

58. What will happen if any of the proposed student debt plans is implemented?

- A) Planners and retail workers will have a chance of becoming professionals.
- B) Working-class students will have increasing access to subsidized education.
- C) Blue-collar workers will have to bear the cost of educating would-be high-earners.
- D) A growing number of students will be able to earn degrees in medicine and law.

六級閱讀例題參考答案

第一章

1. CB 2. BA 3. ACC

第二章

1. 轉折詞：AC 2. 冒號：DD 3. 問號：D

1) 轉折詞：CBA

2) 冒號：BAC

3) 問號：BBA

第三章

同義替換 CA

總括改寫 BA

尤中生存 CB

替換概念 CD

過於絕對 DA

正成間或 A

第四章

總括詞 DA

主語詞 CD

語氣詞 BC

第五串

同义词: 36. D 37. D 44. B

反义词: 2024/12

36. E 37. K 38. G 39. B 40. H 41. M 42. F 43. N 44. D 45. J

第六串

36. J 37. C 38. B 39. G 40. D 41. E 42. B 43. H 44. Q 45. L
